# 1 Introduction

OptimizerE3 Programmer's Reference Guide is for the developer who likes to make a software application with load planning and optimization features. This document contains a full description for the object model, collections, properties, methods, events, enumerations and code samples of OptimizerE3 components as followings;

- OptimizerE3 Object Model
- OptimizerE3 Objects
- OptimizerE3 Collections
- OptimizerE3 Events
- OptimizerE3 Enumerated Constants
- OptimizerE3 Code Samples

## 2 Object Model

OptimizerE3 has one root object - *Calculator*. The *Calculator* has three members - *ContainerTypes*, *SKUs*, and *FilledContainers*. Each member represents a collection of *ContainerType*, *SKU* and *FilledContainer* object respectively. The *ContainerType* represents information of a container size such as sea van, truck, trailer, pallet and carton to be used during the load optimization. It includes a name, sizes, weight, color and description of container. The *SKU* represents information of one SKU such as shipping carton, master carton and pallet load to be loaded into the containers. It includes a name, sizes, weight, quantity, color and description of SKU. The *FilledContainer* represents information of one loaded container after the calculation. It contains the number of SKUs, load-blocks, spaces and load summary. It has another two objects, *Solutions* and *SpacesInContainer*. The *Solutions* object is a collection of *Solution* object that presents one load-block in a container. The *SpaceInContainer* object is a collection of *SpaceInContainer* that represents one space in a container. The following picture shows the

---

conceptual view of the relation between the objects and collections of the *Calculator* object.

## 3 Calculator Object

The *Calculator* is a main object to collect the input data, execute the optimization and store the results of the optimization. The optimization requires the following information as input data;

- A list of container types
- A list of SKUs
- Load type
- Load rules

Available container types are carton (tote), pallets, sea vans, trucks and air pallets. Available SKU types are carton and unitload of cube shape. The roll shape is not supported in the current version of Calculator. Three load types – Single Load, Mix Load and Set Load are supported. For more information of the load type and load rules, please refer the CubeMaster User’s Guide.

### 3.1 Calculator Object Overview

#### □ Properties & Collections

ApplyGroup	ApplyItemSequence
bApplyUnitLoadOnMixLoad	bFillAirbagOnContainer
bSplitIdenticalItem	<del>CntLoadDir</del>
CompareTypeOnItemSum	ContainerCount
FilledContainers (New at ver 10.10.4.0 – replaced Containers)	ContainerTypes (New at ver 10.10.4.0 – replaced ContainerTags)
DataErrorType	EnhanceAllContainers
EnhanceLastContainer	<del>EnhanceSKUList</del>
ErrorMessage	ItemCompareCondition
<del>LicenseKey</del>	LimitMaxLoadWeight
<del>LoadByItemPriority</del>	<del>MachineName</del>
<del>MaxContainerWeight</del>	MergeEmptySpaces
<del>MinCntGapWidth</del>	MixDifferentGroupOnMultiSetLoad
OptimalLoadLevel	<del>OptionBLOBStream</del>
<del>PredefinedOption</del>	<del>SimProperties</del>
SimType	SKUs
StackingRule	<del>SortTypeOnItemSum</del>
SubTitle	Title
UOM	bUseSafeStacking
MinSupportRate	

#### □ Functions & Methods

AddItem	AddItem2
AddPreloadContainer	AddSubContainer
AddUserAdditionItem	ApplyUserAdditionItems
AutoDetectSimType	ContainerInfo
FindItem	GetResultBLOBStream
GetResultRecordset	GetSKURecordset
LoadFromFile	OnEndPage
OnStartPage	Reset
Run	SaveToFile
SetContainer	SetContainer2
SetContainerCornerCastSize	SetContainerNamingRule
SetGroupSequence	SetItemAlias2At
SetItemAliasAt	SetItemArrowDirectionStringAt
SetItemColorAt	SetItemCommentAt
SetItemConstraintPrimaryLoadDirIndexAt	SetItemCumulativeLayerLimitAt
SetItemFlipStartLayerAt	SetItemGroupNameAt
SetItemHatchStyleAt	SetItemJobHeightSlackAt
SetItemJobLengthSlackAt	SetItemLoadDirAt
SetItemLoadTypeAt	SetItemMaxLayerAt
SetItemMaxLayersAt	SetItemMaxLayerStringAt
SetItemNetWeightAt	SetItemPropertiesAt
SetItemProperty4At	SetItemSetRatioAt
SetItemSimpleLoadLowerLayerPatternTypeAt	SetItemSimpleLoadUpperLayerPatternTypeAt
SetItemUserActionTypeAt	SetResultBLOBStream
SetResultRecordset	SubtractItemFromLoadedPattern
SubtractItemFromLoadedPattern2	TryToLoadIntoOneContainer
SetMaxRuns	UnloadContainerByID
UseSavedDefaultOption	

□ **Events**

None
------

## 3.2 Calculator Object Prosperities

□ **ApplyGroup Property**

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Sets or returns whether the optimization uses the group rule.
<b>Syntax</b>	Property ApplyGroup As Bool

---

<b>Remarks</b>	The group rule allows the optimization to place SKUs of the same group into same area in a container. You can group SKUs with order number or destination through the <i>GroupName</i> property of SKU object. . The default value for this property is FALSE.
----------------	--

<b>Data Type</b>	Bool
------------------	------

#### □ **ApplyItemSequence Property**

<b>Applies To</b>	LoadOptimizerLib.Calculator
-------------------	-----------------------------

<b>Description</b>	Sets or returns whether the optimization uses the sequence rule.
--------------------	--

<b>Syntax</b>	Property ApplyItemSequence As Bool
---------------	------------------------------------

<b>Remarks</b>	The sequence rule allows the optimization to put SKUs with high priority earlier in the container and low priority later. You can determine priority of each SKU by using the <i>Sequence</i> property of SKU object. If you are using the group rule with the sequence rule together, the group rule is applied first. The default value for this property is FALSE.
----------------	---

<b>Data Type</b>	Bool
------------------	------

#### □ **bApplyUnitLoadOnMixLoad Property**

<b>Applies To</b>	LoadOptimizerLib.Calculator
-------------------	-----------------------------

<b>Description</b>	Sets or returns whether the optimization makes unit loads first on the mix load.
--------------------	--

<b>Syntax</b>	Property bApplyUnitLoadOnMixLoad As Bool
---------------	--

<b>Remarks</b>	When the bApplyUnitLoadOnMixLoad property is set to TRUE, the optimization fills containers with single SKU type first and the next containers with remain SKUs later. The default value for this property is TRUE.
----------------	---

<b>Data Type</b>	Bool
------------------	------

#### □ **bFillAirbagOnContainer Property**

<b>Applies To</b>	LoadOptimizerLib.Calculator
-------------------	-----------------------------

<b>Description</b>	Sets or returns whether the optimization fills containers with air-bags when the containers filled with single SKU types.
--------------------	---

<b>Syntax</b>	Property bFillAirbagOnContainer As Bool
---------------	---

<b>Remarks</b>	When the bFillAirbagOnContainer property is set to TRUE, the optimization fills containers with air-bags after filling inside the containers with single SKU type completely. The default value for this property is FALSE.
----------------	---

\* Please note that the size of air-bags is determined automatically.

<b>Data Type</b>	Bool
------------------	------

#### □ **bSplitIdenticalItem Property**

<b>Applies To</b>	LoadOptimizerLib.Calculator
-------------------	-----------------------------

<b>Description</b>	Sets or returns whether the optimization places the same type of SKUs in different spaces.
--------------------	--

<b>Syntax</b>	Property bSplitIdenticalItem As Bool
---------------	--------------------------------------

<b>Remarks</b>	When the bSplitIdenticalItem property is set to TRUE, the optimization fills the spaces with maximum efficiency and thus allows splitting the same type of SKUs into different spaces. The default value for this property is TRUE.
----------------	---

<b>Data Type</b>	Bool
------------------	------

---

## ❑ CompareTypeOnItemSum Property

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Sets or returns the rule to indentify a SKU during the optimization.
<b>Syntax</b>	Property CompareTypeOnItemSum As _CompareTypeOnItemSum
<b>Remarks</b>	The following values are available;

Value	Description	Constant
0	Identifies two SKUs if all properties are same.	<i>CompareAll</i>
1	Identifies two SKUs if the name and sizes properties are same.	<i>CompareNameAndSizeOnly</i>
2	Identifies two SKUs if the certain properties are same.	<i>CompareConditionally</i>

The ItemCompareCondition property should be set when the CompareTypeOnItemSum property is set to *CompareConditionally*.  
The default value for this property is CompareAll.

**Data Type**                    \_CompareTypeOnItemSum

## ❑ ContainerCount Property

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Return the number of loaded containers that were generated from the optimization.
<b>Syntax</b>	Property ContainerCount As Long
<b>Remarks</b>	Read Only
<b>Data Type</b>	Long

## ❑ FilledContainers Property

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Returns the collection of the <i>FilledContainer</i> object. The <i>FilledContainer</i> object represents a loaded container generated from the optimization.
<b>Syntax</b>	Property FilledContainers As Variant
<b>Remarks</b>	Read Only. Use this property to access all loaded containers that were generated from the optimization.

**Data Type**                   Variant (*FilledContainers*)

**Examples**                    *Dim oMixLoad As New LoadOptimizerLib.Calculator*

**(Visual Basic Code)**       *Dim oContainers As IFilledContainers*

*Dim oContainer As IContainer*

*Dim i As Integer*

*oMixLoad.Run (0)*

*Set oContainers = oMixLoad.FilledContainers*

*For i = 1 To oContainers.Count*

*Set oContainer = oContainers.Item(i)*

---

```

Debug.Print "# FilledContainer:" + CStr(oContainer.ID)
Debug.Print "  Name =" + oContainer.Name
Debug.Print "  Number of loads= + CStr(oContainer.ItemCount)

```

Next i

## □ ContainerTypes Property

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Returns the collection of the <i>ContainerType</i> object. The <i>ContainerType</i> represents an empty container such as sea container, truck and trailer to be loaded.
<b>Syntax</b>	Property ContainerTypes As Variant
<b>Remarks</b>	Read Only.
<b>Data Type</b>	Variant ( <i>ContainerTypes</i> )

## □ DataErrorType Property

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Returns the error type of the optimization.
<b>Syntax</b>	Property DataErrorType As _DataErrorType
<b>Remarks</b>	<p>Read Only.</p> <p>The available values are below.</p> <ul style="list-style-type: none"> <li>• <b>errorEmptyItemList:</b> There are no cargoes provided in the calculator. So, no empty containers were filled and the <i>FilledContainer</i> member should be empty.</li> <li>• <b>errorItemHasZeroLoadCount:</b> Some of cargoes have no amount to be processed that was provided by the <i>CountToLoad</i> of <i>ISKU</i>. Even with this error the other cargoes with correct amounts have been successfully placed in the empty containers. So please check the <i>FilledContainer</i> member if they are empty or not.</li> <li>• <b>errorItemHasZeroSetCount:</b> Some of cargoes have no set ratio to be processed that was provided by the <i>SetRatio</i> of <i>ISKU</i>. Even with this error the other cargoes with correct set ratio have been successfully placed in the empty containers. So please check the <i>FilledContainer</i> member if they are empty or not.</li> <li>• <b>errorItemIsTooBig:</b> Some of cargoes are bigger than the size of containers that were provided by the <i>Length</i>, <i>Width</i> and <i>Height</i> of <i>ISKU</i>. Even with this error the other cargoes with correct size have been successfully placed in the empty containers. So please check the <i>FilledContainer</i> member if they are empty or not.</li> <li>• <b>errorItemIsTooSmall:</b> Some of cargoes are too small than the size of containers that were provided by the <i>Length</i>, <i>Width</i> and <i>Height</i> of <i>ISKU</i>. Even with this error the other cargoes with correct size have been successfully placed in the empty containers. So please check the <i>FilledContainer</i> member if they are empty or not.</li> <li>• <b>errorInvalidContainerSize:</b> Some of the empty containers have incorrect sizes that were provided by the <i>Length</i>, <i>Width</i> and <i>Height</i> of <i>IContainerType</i>. Even with this error the other empty containers with correct size have been successfully filled with the cargoes. So please check the <i>FilledContainer</i> member if they are empty or not.</li> <li>• <b>errorInvalidItemSize:</b> Some of cargoes have incorrect sizes that were provided by the <i>Length</i>, <i>Width</i> and <i>Height</i> of <i>ISKU</i>. Even with this error the other cargoes with correct size have been successfully placed in the empty</li> </ul>

---

containers. So please check the *FilledContainer* member if they are empty or not.

- **errorEmptyContainerList:** There are no empty containers provided in the calculator. So, no empty containers were filled and the *FilledContainer* member should be empty.
- **errorInvalidItemOrientations:** Some of cargoes have incorrect orientations that were provided by the *Orientation of ISKU*. Even with this error the other cargoes with correct size have been successfully placed in the empty containers. So please check the *FilledContainer* member if they are empty or not.
- **errorValid:** Nothing wrong in the calculator which means all amount of cargoes were placed in the empty container and the *FilledContainer* member has the list of the filled container.
- **errorLockeyNotFound:** A dongle or license was not found in the computer where the calculator runs. Please make sure to put a dongle into the computer.

**Data Type**                    \_DataErrorType

#### □ **EnhanceAllContainers Property**

**Applies To**                    LoadOptimizerLib.Calculator  
**Description**                 Sets or returns whether the optimization uses the enhancement rules to the all loaded containers.

**Syntax**                        Property EnhanceAllContainers As Bool

**Remarks**                    When this property is set to TRUE, the optimization applies the enhancement rules to all loaded containers after feasible solutions found to improve the volume efficiency. The enhancement rules contain the following procedures;

- 1) Replace containers with smaller container
- 2) Unload containers with low volume efficiency
- 3) Fill unused spaces of containers with extra SKUs
- 4) Fill unused spaces of containers with more number of existing SKUs

Each procedure is applies sequentially to each container.  
The default values for this property is FALSE.

**Data Type**                    Bool

#### □ **EnhanceLastContainer Property**

**Applies To**                    LoadOptimizerLib.Calculator  
**Description**                 Sets or returns whether the optimization uses the enhancement rules to the last loaded container.

**Syntax**                        Property EnhanceLastContainer As Bool

**Remarks**                    When this property is set to TRUE, the optimization applies the enhancement rules to the last container only after feasible solutions found to improve the volume efficiency. The enhancement rules contain the following procedures;

- 1) Replace container with smaller container
- 2) Unload container with low volume efficiency
- 3) Fill unused spaces of container with extra SKUs
- 4) Fill unused spaces of container with more number of existing SKUs

Each procedure is applies sequentially to the last container.  
The default values for this property is FALSE.

**Data Type**                    Bool

---

## ❑ ErrorMessage Property

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Returns the message of the optimization when it meets errors during the calculation.
<b>Syntax</b>	Property ErrorMessage As String
<b>Remark</b>	Read Only.
<b>Data Type</b>	String

## ❑ ItemCompareCondition Property

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Sets or returns the condition to compare and identify two SKUs during the optimization.
<b>Syntax</b>	Property ItemCompareCondition As _ItemPropertyID
<b>Remarks</b>	This property represents a set of SKU properties to be compared to identify two SKUs. This property should be set when the CompareTypeOnItemSum property is set to <i>CompareConditionally</i> .

The following values are combined using the OR operator ;

Value	Description	Constant
1	Group Name	<i>propidGroupName</i>
2	SKU Name	<i>propidName</i>
4	Sizes	<i>propidSize</i>
8	Weight	<i>propidWeight</i>
16	Alias 1	<i>propidAlias1</i>
32	Alias 2	<i>PropidAlias2</i>
64	Property 1	<i>propidProperty1</i>
128	Property 2	<i>propidProperty2</i>
256	Property 3	<i>propidProperty3</i>
512	Property 4	<i>propidProperty4</i>
1024	Property 5	<i>propidProperty5</i>
2048	Property 6	<i>propidProperty6</i>
4096	Property 7	<i>propidProperty7</i>
8192	Property 8	<i>propidProperty8</i>
16384	Property 9	<i>propidProperty9</i>
32768	Property 10	<i>propidProperty10</i>
65536	Color	<i>propidColor</i>
131072	Piece Qty	<i>propidSubPackQty</i>
262144	Stack Value	<i>propidStackValue</i>
524288	Load Orientation	<i>propidOrientation</i>
1048576	Load Sequence	<i>propidSeq</i>

For example, set 6 (2 + 4) to specify the name and sizes for comparison two SKUs.

<b>Data Type</b>	_ItemPropertyID
------------------	-----------------

---

### ❑ LimitMaxLoadWeight Property

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Sets or returns whether the optimization fills containers less than max weight.
<b>Syntax</b>	Property LimitMaxLoadWeight As Bool
<b>Remarks</b>	When the LimitMaxLoadWeight property is set to TRUE, the optimization fills containers not to exceed the max weight of each container. Please note the optimization leaves containers even more spaces are available when the load weight reaches the max weight. The MaxWeight property of ContainerType should be set when this rule is used. The default value for this property is FALSE;
<b>Data Type</b>	Bool

### ❑ MergeEmptySpaces Property

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Sets or returns whether the optimization merges spaces inside containers.
<b>Syntax</b>	Property MergeEmptySpaces As Bool
<b>Remarks</b>	When this property is set to TRUE, the optimization merges two spaces and makes new space where more SKUs are filled with. The default value for this property is TRUE.
<b>Data Type</b>	Bool

### ❑ MixDifferentGroupOnMultiSetLoad Property

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Sets or returns whether the optimization puts SKUs of different groups in same container.
<b>Syntax</b>	Property MixDifferentGroupOnMultiSetLoad As Long
<b>Remarks</b>	The default value for this property is FALSE.
<b>Data Type</b>	Long

### ❑ OptimalLoadLevel Property

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Sets or returns the level of the optimization.
<b>Syntax</b>	Property OptimalLoadLevel As LoadLevel
<b>Remarks</b>	The following values are available;

Value	Description	Constant
1	Fastest and normal quality.	<i>level1</i>
2	Better quality than level 2.	<i>level2</i>
3	Faster than level 4.	<i>level3</i>
4	Slowest and best quality.	<i>level4</i>

The default value for this property is *level2*.

<b>Data Type</b>	LoadLevel
------------------	-----------

### ❑ SimType Property

---

**Applies To** LoadOptimizerLib.Calculator  
**Description** Sets or returns the load type of the optimization.  
**Syntax** Property SimType As SimulationType  
**Remarks** The following values are available;

Value	Description	Constant
0	Mix Load	<i>simMixLoad</i>
1	Set Load	<i>simSetLoadByQuantity</i>
3	Single Load	<i>simSimpleLoad</i>
4	Multiple Set Load	<i>simOrderSetLoadByQuantity</i>

The default value for this property is *simMixLoad*.

**Data Type** SimulationType

### □ SKUs Property

**Applies To** LoadOptimizerLib.Calculator  
**Description** Returns the collection of the SKU object. The SKU object represents one SKU to be stowed in container during the optimization.  
**Syntax** Property SKUs As Variant  
**Remarks** Read Only. Use this property to manage a list of SKUs. New SKUs can be added or existing SKUs can be removed from the list.

**Data Type** Variant

**Example (Visual Basic Code)** The following example changes the group name of the all SKUs with new name.

```
Dim oMixLoad As New LoadOptimizerLib.Calculator
Dim oSKUs As ISKUs
Dim oSKU As ISKU
Dim i As Integer

Set oSKUs = oMixLoad.SKUs
For i = 1 To oSKUs.Count
    Set oSKU = oSKUs.Item(i)
    oSKU.GroupName = "NewGroup"
Next i

Set oSKUs = Nothing
Set oSKU = Nothing
Set oMixLoad = Nothing
```

### □ StackingRule Property

**Applies To** LoadOptimizerLib.Calculator  
**Description** Sets or returns the stacking rule to be used by the optimization.  
**Syntax** Property StackingRule As ItemStackingRule  
**Remarks** The following values are available;

Value	Description	Constant
1	When this rule is activated, the calculation	<i>HigherStackValueBott</i>

	will utilize the stack value of the cargoes. A cargo with a high stack value will not be placed on the top of a cargo with a low stack value.	<i>omFirst</i>
2	When this rule is activated, the calculation will stack two different cargoes on each other only if the stack values of them are same.	<i>BothStackValuesSame</i>
3	When this rule is activated, the calculation will stack two different cargoes on each other only if the footprints of them are the same.	<i>BothFootPrintsSame</i>
4	When this rule is activated, the calculation will consider the weight of the cargoes for the stacking two different cargoes. A cargo will be not placed on the top of a lighter cargo. For example, a cargo of weight 300 Kg is not allowed to be placed on the top of a cargo of weight 200 Kg, which will not be placed on the top of a cargo 100 Kg.	<i>HeavierBottomFirst</i>
5	When this rule is activated, the calculation will consider the floor stack of the cargoes. Floor Stacking rules are guidelines for how to load cargo into a vehicle when they're not placed on a pallet (sometimes referred to as the dead stacking). There are three options. For more about the floor stack properties of the cargo, please see the <a href="#">FloorStackType</a> of the cargo.	<i>FloorStack</i>
6	<p>When this rule is activated, the calculation will look up the Stack Matrix. The Stack Matrix allows you to define the relationships between two different cargoes. It can be defined as a square matrix (like a row and column spreadsheet such as Lotus 1-2-3 or Microsoft Excel); this matrix contains one row and one column for each cargo name.</p> <p>When you define a cargo, the stack matrix initializes automatically. When a new cargo is defined, a new row and column are added to the matrix. Each entry in the matrix is a box marked with a “Yes” or “No.”</p> <p>The Yes/No indicate whether a cargo for the corresponding column can be placed on top of a cargo for the corresponding row.</p> <p>The cargo across the top of the matrix (columns) are considered the “top” cargo, while the cargo along the side of the matrix (rows) is considered the “bottom” cargo.</p>	<i>FollowStackMatrix</i>
100	When this rule is activated, any cargoes are allowed to be placed on the top of anything else in terms of the way to maximize the space utilization of the container being filled up.	<i>BestFit</i>
101	When this rule is activated, the calculation will not stack any cargoes either on top of different cargoes.	<i>AlwaysNotAllowed</i>

Data Type

ItemStackingRule

❑ SubTitle Property

---

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Sets or returns the description of the optimization.
<b>Syntax</b>	Property SubTitle As String
<b>Data Type</b>	String

□ **Title Property**

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Sets or returns the title of the optimization.
<b>Syntax</b>	Property Title As String
<b>Data Type</b>	String

□ **UOM Property**

<b>Applies To</b>	LoadOptimizerLib. Calculator												
<b>Description</b>	Sets or gets the unit of measure for the calculation.												
<b>Syntax</b>	Property UOM As LoadOptimizerLib. Calculator. _UnitType												
<b>Remarks</b>	<table border="1"> <thead> <tr> <th>Constant</th> <th>Description</th> <th>Enumeration</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>inch+lbs</td> <td><i>UnitEnglish</i></td> </tr> <tr> <td>1</td> <td>mm+Kg</td> <td><i>UnitMetric</i></td> </tr> <tr> <td>2</td> <td>Cm+Kg</td> <td><i>UnitHighMetric</i></td> </tr> </tbody> </table>	Constant	Description	Enumeration	0	inch+lbs	<i>UnitEnglish</i>	1	mm+Kg	<i>UnitMetric</i>	2	Cm+Kg	<i>UnitHighMetric</i>
Constant	Description	Enumeration											
0	inch+lbs	<i>UnitEnglish</i>											
1	mm+Kg	<i>UnitMetric</i>											
2	Cm+Kg	<i>UnitHighMetric</i>											
<b>Data Type</b>	LoadOptimizerLib. Calculator. _UnitType												

□ **bUseSafeStacking Property**

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Sets or returns whether the optimization uses the safe stacking rule or not.
<b>Syntax</b>	Property bUseSafeStacking As Bool
<b>Remarks</b>	The safe stacking rule allows the optimization to place SKUs in a safe stacking on top of the other SKUs to avoid falling down. The other property <i>MinSupportRate</i> would be specified for increasing the supported area of the top load.
<b>Data Type</b>	Bool

□ **MinSupportRate Property**

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Sets or returns the amount of the top load to be supported by the bottom load in proportional rate when the safe stacking rule is activated.
<b>Syntax</b>	Property MinSupportRate As Double
<b>Remarks</b>	This property is activated only when the <i>bUseSafeStacking</i> was set <i>True</i> .
<b>Data Type</b>	Double

### 3.3 Calculator Object Methods

□ **AddItem Method**

---

<b>Applies To</b>	LoadOptimizerLib.Calculator														
<b>Description</b>	Insert a new SKU into the simulation.														
<b>Syntax</b>	Sub AddItem( <i>tName</i> As String, <i>tQuantity</i> As Long, <i>tdLength</i> As Double, <i>tdWidth</i> As Double, <i>tdHeight</i> As Double, <i>tdWeight</i> As Double)														
<b>Parameters</b>	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><i>tName</i></td> <td>Name of SKU</td> </tr> <tr> <td><i>tQuantity</i></td> <td>The number of SKU</td> </tr> <tr> <td><i>tdLength</i></td> <td>Length of SKU</td> </tr> <tr> <td><i>tdWidth</i></td> <td>Width of SKU</td> </tr> <tr> <td><i>tdHeight</i></td> <td>Height of SKU</td> </tr> <tr> <td><i>tdWeight</i></td> <td>Weight of SKU</td> </tr> </tbody> </table>	Parameter	Description	<i>tName</i>	Name of SKU	<i>tQuantity</i>	The number of SKU	<i>tdLength</i>	Length of SKU	<i>tdWidth</i>	Width of SKU	<i>tdHeight</i>	Height of SKU	<i>tdWeight</i>	Weight of SKU
Parameter	Description														
<i>tName</i>	Name of SKU														
<i>tQuantity</i>	The number of SKU														
<i>tdLength</i>	Length of SKU														
<i>tdWidth</i>	Width of SKU														
<i>tdHeight</i>	Height of SKU														
<i>tdWeight</i>	Weight of SKU														
<b>Remarks</b>	Use the <i>AddNewSKU()</i> method of the SKUs object if you want more convenient way.														
<b>Data Type</b>	None														

□ **AddItem2 Function**

<b>Applies To</b>	LoadOptimizerLib.Calculator																																															
<b>Description</b>	Insert a new SKU into the simulation.																																															
<b>Syntax</b>	Function AddItem2( <i>tName</i> As String, <i>tQuantity</i> As Long, <i>tdLength</i> As Double, <i>tdWidth</i> As Double, <i>tdHeight</i> As Double, <i>tdWeight</i> As Double, <i>tDir</i> As ItemLoadDirType, <i>tMaxLayer</i> As Long, <i>StackValue</i> As Long, <i>tPriority</i> As Long, <i>tColor</i> As Long) As Long																																															
<b>Parameters</b>	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><i>tName</i></td> <td>Name of SKU</td> </tr> <tr> <td><i>tQuantity</i></td> <td>The number of SKU</td> </tr> <tr> <td><i>tdLength</i></td> <td>Length of SKU</td> </tr> <tr> <td><i>tdWidth</i></td> <td>Width of SKU</td> </tr> <tr> <td><i>tdHeight</i></td> <td>Height of SKU</td> </tr> <tr> <td><i>tdWeight</i></td> <td>Weight of SKU</td> </tr> <tr> <td><i>tDir</i></td> <td>A constant to permit the orientations of SKU. The constant <i>ItemLoadDirType</i> has the following meanings. <table border="1"> <thead> <tr> <th>Value</th> <th>Description</th> <th>Enum</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Permit orientation #1</td> <td><i>dir1</i></td> </tr> <tr> <td>2</td> <td>Permit orientation #2</td> <td><i>dir2</i></td> </tr> <tr> <td>3</td> <td>Permit orientation #1 and #2</td> <td><i>dirBasic</i></td> </tr> <tr> <td>4</td> <td>Permit orientation #3</td> <td><i>dir3</i></td> </tr> <tr> <td>8</td> <td>Permit orientation #4</td> <td><i>dir4</i></td> </tr> <tr> <td>16</td> <td>Permit orientation #5</td> <td><i>dir5</i></td> </tr> <tr> <td>32</td> <td>Permit orientation #6</td> <td><i>dir6</i></td> </tr> <tr> <td>63</td> <td>Permit all orientations (#1,2,3,4,5,6)</td> <td><i>dirAll</i></td> </tr> </tbody> </table> </td> </tr> <tr> <td><i>tMaxLayer</i></td> <td>The number of max stacks of SKU. Leave 0 not to set the max stack of the SKU.</td> </tr> <tr> <td><i>StackValue</i></td> <td>Stack priority of SKU.</td> </tr> </tbody> </table>	Parameter	Description	<i>tName</i>	Name of SKU	<i>tQuantity</i>	The number of SKU	<i>tdLength</i>	Length of SKU	<i>tdWidth</i>	Width of SKU	<i>tdHeight</i>	Height of SKU	<i>tdWeight</i>	Weight of SKU	<i>tDir</i>	A constant to permit the orientations of SKU. The constant <i>ItemLoadDirType</i> has the following meanings. <table border="1"> <thead> <tr> <th>Value</th> <th>Description</th> <th>Enum</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Permit orientation #1</td> <td><i>dir1</i></td> </tr> <tr> <td>2</td> <td>Permit orientation #2</td> <td><i>dir2</i></td> </tr> <tr> <td>3</td> <td>Permit orientation #1 and #2</td> <td><i>dirBasic</i></td> </tr> <tr> <td>4</td> <td>Permit orientation #3</td> <td><i>dir3</i></td> </tr> <tr> <td>8</td> <td>Permit orientation #4</td> <td><i>dir4</i></td> </tr> <tr> <td>16</td> <td>Permit orientation #5</td> <td><i>dir5</i></td> </tr> <tr> <td>32</td> <td>Permit orientation #6</td> <td><i>dir6</i></td> </tr> <tr> <td>63</td> <td>Permit all orientations (#1,2,3,4,5,6)</td> <td><i>dirAll</i></td> </tr> </tbody> </table>	Value	Description	Enum	1	Permit orientation #1	<i>dir1</i>	2	Permit orientation #2	<i>dir2</i>	3	Permit orientation #1 and #2	<i>dirBasic</i>	4	Permit orientation #3	<i>dir3</i>	8	Permit orientation #4	<i>dir4</i>	16	Permit orientation #5	<i>dir5</i>	32	Permit orientation #6	<i>dir6</i>	63	Permit all orientations (#1,2,3,4,5,6)	<i>dirAll</i>	<i>tMaxLayer</i>	The number of max stacks of SKU. Leave 0 not to set the max stack of the SKU.	<i>StackValue</i>	Stack priority of SKU.
Parameter	Description																																															
<i>tName</i>	Name of SKU																																															
<i>tQuantity</i>	The number of SKU																																															
<i>tdLength</i>	Length of SKU																																															
<i>tdWidth</i>	Width of SKU																																															
<i>tdHeight</i>	Height of SKU																																															
<i>tdWeight</i>	Weight of SKU																																															
<i>tDir</i>	A constant to permit the orientations of SKU. The constant <i>ItemLoadDirType</i> has the following meanings. <table border="1"> <thead> <tr> <th>Value</th> <th>Description</th> <th>Enum</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Permit orientation #1</td> <td><i>dir1</i></td> </tr> <tr> <td>2</td> <td>Permit orientation #2</td> <td><i>dir2</i></td> </tr> <tr> <td>3</td> <td>Permit orientation #1 and #2</td> <td><i>dirBasic</i></td> </tr> <tr> <td>4</td> <td>Permit orientation #3</td> <td><i>dir3</i></td> </tr> <tr> <td>8</td> <td>Permit orientation #4</td> <td><i>dir4</i></td> </tr> <tr> <td>16</td> <td>Permit orientation #5</td> <td><i>dir5</i></td> </tr> <tr> <td>32</td> <td>Permit orientation #6</td> <td><i>dir6</i></td> </tr> <tr> <td>63</td> <td>Permit all orientations (#1,2,3,4,5,6)</td> <td><i>dirAll</i></td> </tr> </tbody> </table>	Value	Description	Enum	1	Permit orientation #1	<i>dir1</i>	2	Permit orientation #2	<i>dir2</i>	3	Permit orientation #1 and #2	<i>dirBasic</i>	4	Permit orientation #3	<i>dir3</i>	8	Permit orientation #4	<i>dir4</i>	16	Permit orientation #5	<i>dir5</i>	32	Permit orientation #6	<i>dir6</i>	63	Permit all orientations (#1,2,3,4,5,6)	<i>dirAll</i>																				
Value	Description	Enum																																														
1	Permit orientation #1	<i>dir1</i>																																														
2	Permit orientation #2	<i>dir2</i>																																														
3	Permit orientation #1 and #2	<i>dirBasic</i>																																														
4	Permit orientation #3	<i>dir3</i>																																														
8	Permit orientation #4	<i>dir4</i>																																														
16	Permit orientation #5	<i>dir5</i>																																														
32	Permit orientation #6	<i>dir6</i>																																														
63	Permit all orientations (#1,2,3,4,5,6)	<i>dirAll</i>																																														
<i>tMaxLayer</i>	The number of max stacks of SKU. Leave 0 not to set the max stack of the SKU.																																															
<i>StackValue</i>	Stack priority of SKU.																																															

---

---

<i>tPriority</i>	Load priority of SKU. A SKU with less priority is places earlier in the container. This is activated only when the <i>LoadByItemPriority</i> = TRUE
------------------	---

<i>tColor</i>	Color of SKU. Set 0 to assign a random color.
---------------	---

**Remarks** Use the *AddNewSKU()* method of the SKUs object if you want more convenient way.

**Data Type** Long

### □ FindItem Function

**Applies To** LoadOptimizerLib.Calculator

**Description** Find a SKU with a name

**Syntax** Function FindItem(*tItemName* As String) As Long

**Parameters**

Parameter	Description
<i>tItemName</i>	A SKU name to search in the SKU list

**Remarks** Returns 0 if no SKU is found

**Data Type** Long

### □ GetResultBLOBStream Function

**Applies To** LoadOptimizerLib.Calculator

**Description** Get a stream of the engine.

**Syntax** Function GetResultBLOBStream() As Object

**Parameter** None

**Example** Dim oMixLoad As New LoadOptimizerLib.Calculator

**(Visual Basic Code)** Dim oResultStream As Stream

```
'Set container
oMixLoad.SetContainer typeContainer, "40ft", 12000, 3600, 3890, 300, 3000, _
0, 0, 0, 0, RGB(255, 255, 255), 0
```

```
'Add SKUs
oMixLoad.AddItem2 "item2", 60, 1900, 1800, 700, 10.2, dirBasic, 0, 0, 4, 0
oMixLoad.AddItem2 "item2", 200, 1200, 876, 298, 33.2, dirBasic, 0, 0, 3, 0
oMixLoad.AddItem2 "item3", 100, 1000, 1000, 798, 33.9, dirBasic, 0, 0, 2, 0
```

```
'Start the calculation
oMixLoad.Run (0)
```

```
'Get a stream from the engine and save the stream to a file
Set oResultStream = oMixLoad.GetResultBLOBStream
oResultStream.SaveToFile "c:\Result.slover", adSaveCreateOverWrite
```

```
Set oResultStream = Nothing
Set oMixLoad = Nothing
```

**Remarks** Use the *SetResultBLOBStream* to set a stream to the engine

**Data Type** IStream

---

## ❑ LoadFromFile Method

<b>Applies To</b>	LoadOptimizerLib.Calculator				
<b>Description</b>	Load the simulation from a file.				
<b>Syntax</b>	Sub LoadFromFile( <i>FileName</i> As String)				
<b>Parameters</b>	<table border="1"><thead><tr><th>Parameter</th><th>Description</th></tr></thead><tbody><tr><td><i>FileName</i></td><td>A full path name to read</td></tr></tbody></table>	Parameter	Description	<i>FileName</i>	A full path name to read
Parameter	Description				
<i>FileName</i>	A full path name to read				
<b>Remarks</b>	Use the <i>SaveToFile</i> to store a simulation to a file.				
<b>Data Type</b>	None				

## ❑ Reset Method

<b>Applies To</b>	LoadOptimizerLib.Calculator
<b>Description</b>	Initialize the engine.
<b>Syntax</b>	Sub Reset()
<b>Parameters</b>	None
<b>Data Type</b>	None

## ❑ Run Method

<b>Applies To</b>	LoadOptimizerLib.Calculator				
<b>Description</b>	Start the calculation of the engine.				
<b>Syntax</b>	Sub Run( <i>tbShowGagebar</i> As Long)				
<b>Parameters</b>	<table border="1"><thead><tr><th>Parameter</th><th>Description</th></tr></thead><tbody><tr><td><i>tbShowGagebar</i></td><td>&lt;Internal use only&gt;</td></tr></tbody></table>	Parameter	Description	<i>tbShowGagebar</i>	<Internal use only>
Parameter	Description				
<i>tbShowGagebar</i>	<Internal use only>				
<b>Data Type</b>	None				

## ❑ SaveToFile Method

<b>Applies To</b>	LoadOptimizerLib.Calculator				
<b>Description</b>	Store the simulation to a file.				
<b>Syntax</b>	Sub SaveToFile( <i>FileName</i> As String)				
<b>Parameters</b>	<table border="1"><thead><tr><th>Parameter</th><th>Description</th></tr></thead><tbody><tr><td><i>FileName</i></td><td>A full path name to write.</td></tr></tbody></table>	Parameter	Description	<i>FileName</i>	A full path name to write.
Parameter	Description				
<i>FileName</i>	A full path name to write.				
<b>Remarks</b>	Use the <i>LoadFromFile</i> to load a simulation from a file.				
<b>Data Type</b>	None				

## ❑ SetContainerNamingRule Method

<b>Applies To</b>	LoadOptimizerLib.Calculator				
<b>Description</b>	Set an option to name containers in the solutions.				
<b>Syntax</b>	Sub SetContainerNamingRule( <i>Prefix</i> As String, <i>Suffix</i> As String, <i>StartSeq</i> As Long, <i>SeqLength</i> As Long)				
<b>Parameter</b>	<table border="1"><thead><tr><th>Parameter</th><th>Description</th></tr></thead><tbody><tr><td><i>Prefix</i></td><td>Prefix of the name</td></tr></tbody></table>	Parameter	Description	<i>Prefix</i>	Prefix of the name
Parameter	Description				
<i>Prefix</i>	Prefix of the name				

---

<i>Suffix</i>	Suffix of the name
<i>StartSeq</i>	The starting sequence of the name
<i>SeqLength</i>	The length of the sequence of the name

**Remarks** The engine will name all the loaded containers with this rule after the calculation. For example, if the Prefix has '#', Suffix has 'AH', StartSeq has 2 and SeqLength has 3, the names of three containers are '#002AH', '#003AH' and '#004AH'.

**Data Type** None

#### □ **SetMaxRuns Method**

**Applies To** LoadOptimizerLib.Calculator

**Description** Set an option to tune the calculation.

**Syntax** Sub SetMaxRuns(*MaxSearchVolPercent* As Double, *MaxSearchDepth* As Long, *MaxTimeSeconds* As Long)

**Parameter**

Parameter	Description
<i>MaxSearchVolPercent</i>	Max volume percent to be allowed for the searching process of the calculation algorithm. The usual calculation tries to find 100 percent while evaluating the searching area but this option makes it stop if an evaluation with this value found and move to next. This option can lead to poor solutions at faster time.
<i>MaxSearchDepth</i>	Max search depth to be allowed for the searching process of the calculation algorithm. The calculation engine tries to evaluate all depths in the searching area but this option gives less ones to the calculation and make it faster but lead to poor solutions.
<i>MaxTimeSeconds</i>	Not available at this time. Please give 0.

**Example**  
(Visual Basic Code)  

```
Dim oMixLoad As New LoadOptimizerLib.Calculator
oMixLoad.SetMaxRuns 80,2,0
oMixLoad = Nothing
```

**Remarks** The call of this member makes the calculation works faster for a big and large shipment by lowering the number and depth of the searching area. The less number of *MaxSearchVolPercent* and *MaxSearchDepth* works faster but the solutions get worse than was usual.

**Data Type** None

#### □ **SetResultBLOBStream Method**

**Applies To** LoadOptimizerLib.Calculator

**Description** Set a stream to the engine.

**Syntax** Sub SetResultBLOBStream(*pStream* As Object)

**Parameter**

Parameter	Description
<i>pStream</i>	An <i>IStream</i> object

**Example**  
(Visual Basic Code)  

```
Dim oMixLoad As New LoadOptimizerLib.Calculator
Dim stOption As Stream
```

```
Set stOption = New Stream
stOption.Open
stOption.Type = adTypeBinary
```

---

```
stOption.LoadFromFile "C:\ResultSimulation.solver"
```

```
oMixLoad. SetResultBLOBStream stOption
```

```
stOption = Nothing
```

```
oMixLoad = Nothing
```

**Remarks** Use *GetResultBLOBStream* to get a stream from the engine

**Data Type** None

#### □ **UnloadContainerByID Method**

**Applies To** LoadOptimizerLib.Calculator

**Description** Unload a container and remove it from the solutions.

**Syntax** Sub UnloadContainerByID(ContainerID As Long)

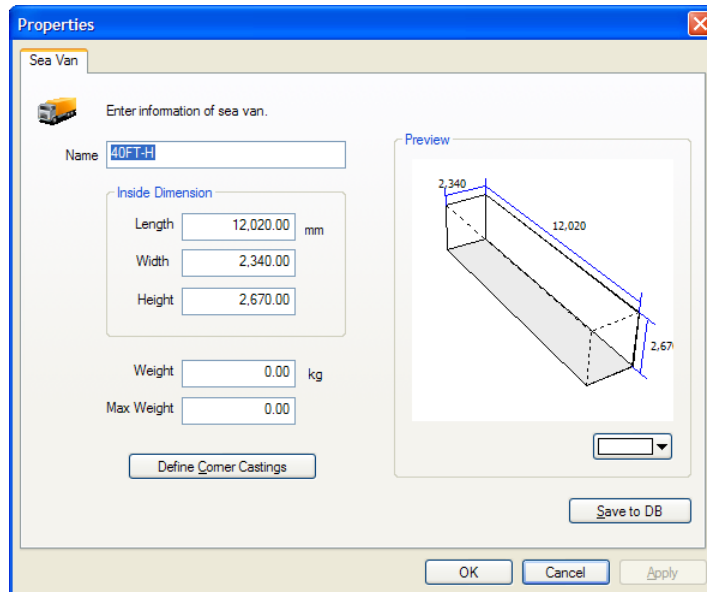

**Parameters**

Parameter	Description
ContainerID	An index in the list to indicate the container to remove

**Data Type** None

## 4 ContainerType Object

The *ContainerType* object provides a set of properties such as type, name, size, weight and description of one container type. Using this object, you can define one container type to be filled during the optimization. The following picture shows the properties window of the container type at the CubeMaster software.

The following picture shows the relations of the three objects – *Calculator*, *ContainerTypes* and *ContainerType* which means the *ContainerType* is accessible only through the *ContainerTypes*.

[Picture 6. ContainerTypes Object]

### 4.1 ContainerType Object Overview

#### □ ContainerType Object Properties, Collections

Alias	Capa
Color	Height
Length	MaxCE
MaxWeight	Name
OutHeight	OutLength

---

OutWidth	PalletType
Type	TypeString
UnitPrice	Weight
Width	

❑ **ContainerType Object Method**

None

❑ **ContainerType Object Event**

None

## 4.2 ContainerType Object Properties

❑ **Alias Property**

**Applies To** LoadOptimizerLib.IContainerType  
**Description** Sets or returns the alias of container  
**Syntax** Property Alias As String  
**Data Type** String

❑ **Capa Property**

**Applies To** LoadOptimizerLib.IContainerType  
**Description** Sets or returns the number of containers  
**Syntax** Property Capa As Integer  
**Data Type** Integer

❑ **Color Property**

**Applies To** LoadOptimizerLib.IContainerType  
**Description** Sets or returns the color of container in RGB format. Set 0 to assign a random color.  
**Syntax** Property Color As Long  
**Data Type** Long

❑ **Height Property**

**Applies To** LoadOptimizerLib.IContainerType  
**Description** Sets or returns the internal height of container  
**Syntax** Property Height As Double  
**Data Type** Double

❑ **Length Property**

**Applies To** LoadOptimizerLib.IContainerType

---

<b>Description</b>	Sets or returns the internal length of container
<b>Syntax</b>	Property Length As Double
<b>Data Type</b>	Double

❑ **MaxCE Property**

<b>Applies To</b>	LoadOptimizerLib.IContainerType
<b>Description</b>	Sets or returns the max cube efficiency in percentage of container
<b>Syntax</b>	Property MaxCE As Double
<b>Data Type</b>	Double

❑ **MaxWeight Property**

<b>Applies To</b>	LoadOptimizerLib.IContainerType
<b>Description</b>	Sets or returns the max weight (payload) of container
<b>Syntax</b>	Property MaxWeight As Double
<b>Data Type</b>	Double

❑ **Name Property**

<b>Applies To</b>	LoadOptimizerLib.IContainerType
<b>Description</b>	Sets or returns the name of container
<b>Syntax</b>	Property Name As String
<b>Data Type</b>	String

❑ **OutHeight Property**

<b>Applies To</b>	LoadOptimizerLib.IContainerType
<b>Description</b>	Sets or returns the external height of container
<b>Syntax</b>	Property OutHeight As Double
<b>Data Type</b>	Double

❑ **OutLength Property**

<b>Applies To</b>	LoadOptimizerLib.IContainerType
<b>Description</b>	Sets or returns the external length of container
<b>Syntax</b>	Property OutLength As Double
<b>Data Type</b>	Double

❑ **OutWidth Property**

<b>Applies To</b>	LoadOptimizerLib.IContainerType
<b>Description</b>	Sets or returns the external width of container
<b>Syntax</b>	Property OutWidth As Double
<b>Data Type</b>	Double

❑ **PalletType Property**

---

**Applies To** LoadOptimizerLib.IContainerType  
**Description** Sets or returns the pallet type of container if it is a pallet  
**Syntax** Property PalletType As \_PalletType  
**Remarks** This property is effective only the type of container is a pallet(*Type = typePallet*)

Constant	Description	Enumeration
0	Default	typeDefault
1	Paper pallet	typePaperPallet
2	Steel pallet	typeSteelPallet
3	Wooden pallet	typeWoodPallet

**Data Type** \_PalletType

### □ Type Property

**Applies To** LoadOptimizerLib.IContainerType  
**Description** Sets or returns the type of container  
**Syntax** Property Type As CntType  
**Remarks**

Constant	Description	Enumeration
0	Ship carton or box	<i>typeBox</i>
1	Pallet	<i>typePallet</i>
2	Sea van	<i>typeContainer</i>
3	Truck and trailer	<i>typeTruck</i>
4	Air pallet	<i>typeAircraft</i>

The *PalletType* should be defined if the *Type=typePallet*

**Data Type** CntType

### □ TypeString Property

**Applies To** LoadOptimizerLib.IContainerType  
**Description** Sets or returns the type of container in a string  
**Syntax** Property TypeString As String  
**Remarks**

Type	Returns
<i>typeBox</i>	'BOX'
<i>typePallet</i>	'PLT'
<i>typeContainer</i>	'CTN'
<i>typeTruck</i>	'TRK'
<i>typeAircraft</i>	'ULD'

**Data Type** String

### □ UnitPrice Property

**Applies To** LoadOptimizerLib.IContainerType  
**Description** Sets or returns the unit price (or shipping cost) of container  
**Syntax** Property UnitPrice As Double

---

<b>Data Type</b>	Double
------------------	--------

❑ **Weight Property**

<b>Applies To</b>	LoadOptimizerLib.IContainerType
<b>Description</b>	Sets or returns the weight of container
<b>Syntax</b>	Property Weight As Double
<b>Data Type</b>	Double

❑ **Width Property**

<b>Applies To</b>	LoadOptimizerLib.IContainerType
<b>Description</b>	Sets or returns the internal width of container
<b>Syntax</b>	Property Width As Double
<b>Data Type</b>	Double

## 5 ContainerTypes Object

The *ContainerTypes* is a collection to store multiple *ContainerType* objects. The *ContainerTypes* is accessible through the property *ContainerTypes* of the *Calculator* object. Once the *ContainerTypes* is acquired, you can iterate all elements in it.

[Picture 6. ContainerTypes Object]

### 5.1 ContainerTypes Object Overview

#### □ ContainerTypes Object Properties

Count	Item
-------	------

#### □ ContainerTypes Object Method

AddNewContainer	<del>RemoveAllSubContainerTags (Removed at ver 10.10.4.0)</del>
<del>AddNewContainerTag (Removed at ver 10.10.4.0)</del>	RemoveAll (New at ver 10.10.4.0 – Replaced RemoveAllSubContainerTags)

### 5.2 ContainerTypes Object Properties

#### □ Count Property

<b>Applies To</b>	LoadOptimizerLib.IContainerTypes
<b>Description</b>	Returns the number of items (container types) in the collection.
<b>Syntax</b>	Property Count As Long
<b>Data Type</b>	Long

#### □ Item Property

<b>Applies To</b>	LoadOptimizerLib.IContainerTypes				
<b>Description</b>	Returns an item (container type) in the collection.				
<b>Syntax</b>	Property Item( <i>index</i> As Long) As ContainerType				
<b>Parameters</b>	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><i>Index</i></td> <td>An index to item between 1 and <i>Count</i>.</td> </tr> </tbody> </table>	Parameter	Description	<i>Index</i>	An index to item between 1 and <i>Count</i> .
Parameter	Description				
<i>Index</i>	An index to item between 1 and <i>Count</i> .				
<b>Data Type</b>	<i>ContainerType</i>				

---

## 5.3 ContainerTypes Object Methods

### □ AddNewContainer Method

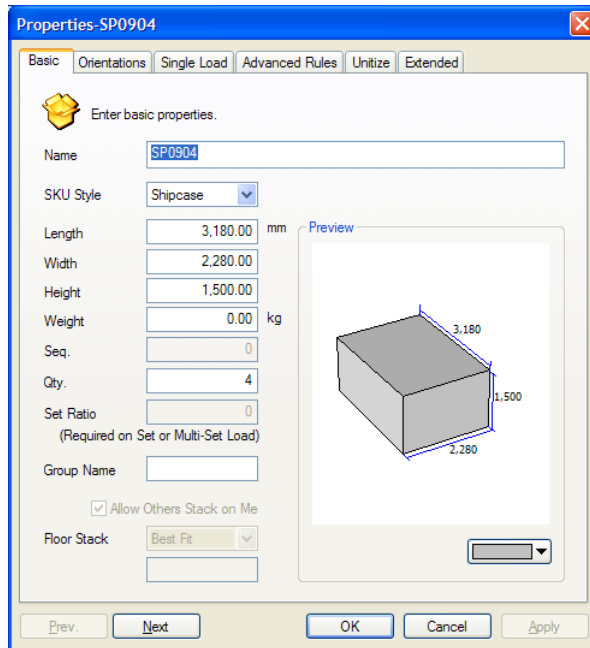

<b>Applies To</b>	LoadOptimizerLib.IContainerTypes
<b>Description</b>	Adds a new container type into the collection and returns <i>ContainerType</i> object to allow you to access the new container type.
<b>Syntax</b>	Sub AddNewContainer() As ContainerType
<b>Example (Visual Basic Code)</b>	<pre>Dim oContainerTypes Dim oContainerType  Set oContainerTypes = oOptimizer.ContainerTypes  'Add new container type Set oContainerType = oContainerTypes.AddNewContainer oContainerType.Type = typeContainer oContainerType.Name = "40FT" oContainerType.Length = 12020 oContainerType.Width = 2330 oContainerType.Height = 2330 oContainerType.MaxCE = 0.7 oContainerType.MaxWeight = 2000 oContainerType.UnitPrice = 4000 'Shipping cost</pre>
<b>Remarks</b>	See <i>ContainerType</i> object to learn about the properties for container type
<b>Data Type</b>	<i>ContainerType</i>

### □ Remove Method

<b>Applies To</b>	LoadOptimizerLib.IContainerTypes
<b>Description</b>	Removes all items in the collections. A new member at ver 10.10.4.0 to replace an old member RemoveAllSubContainerTags().
<b>Syntax</b>	Sub Remove ()

## 6 SKU Object

The *SKU* object provides a set of properties such as name, size, weight and description of one SKU type. Using this object, you can define a SKU to be stowed in the container type that was defined with the *ContainerType* object. The following picture shows the properties window of the SKU at the CubeMaster software.

The following picture shows the relations of the three objects – *Calculator*, *SKUs* and *SKU* which means the *SKU* is accessible only through the *SKUs*.

[Picture9. SKU Object]

### 6.1 SKU Object Overview

#### □ SKU Object Properties, Collections

Alias1	Alias2
bApplyBarcodeLabel	bKeepBasicOrientationOnSimpleLoad
CBM	Color

CountToLoad	DepartureTime
Description	GroupName
Height	Length
LoadDir1MaxLayer	LoadDir2MaxLayer
LoadDir3MaxLayer	LoadDir4MaxLayer
LoadDir5MaxLayer	LoadDir6MaxLayer
LoadedCount	LoadSequence
Name	NetWeight
Orientation	PrimaryOrientationIndex
Property 1	Property 2
Property 3	Property 4
Property 5	Property 6
Property 7	Property 8
Property 9	Property 10
Property 11	Property 12
Property 13	Property 14
Property 15	Property 16
Property 17	Property 18
Property 19	Property 20
SecondaryOrientationIndexAtLastSpace	SetRatio
SimpleLoadLowerLayeAllowOverhang	SimpleLoadLowerLayerPatternType
SimpleLoadLayersQtyRotated	SimpleLoadUpperLayerPatternType
SimpleLoadOverhangLength	SimpleLoadOverhangWidth
StackValue	SubPackQty
TurnStartLayer	Type
UnitLoadBLOBStream	UnitloadContainer
UnitPrice	UnloadedCount
Weight	Width
DeadStackType	DeadStackOthersAllowedOnMe
MaxWeightAllowedOnMe	MinBottomLayer

□ **SKU Object Method**

AddSubItem	SetPropertyBasic
------------	------------------

□ **SKU Object Event**

None
------

---

## 6.2 SKU Object Properties

### □ Alias1 Property

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the alias1 of the SKU
<b>Syntax</b>	Property Alias1 As String
<b>Data Type</b>	String

### □ Alias2 Property

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the alias2 of the SKU
<b>Syntax</b>	Property Alias2 As String
<b>Data Type</b>	String

### □ bApplyBarcodeLabel Property

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns whether the SKU has a barcode on the 3D graphics
<b>Syntax</b>	Property bApplyBarcodeLabel As Bool
<b>Data Type</b>	Bool

### □ bKeepBasicOrientationOnSimpleLoad Property

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns whether the all orientation are allowed on the bottom of container. If set TRUE, only the basic orientations allowed on the bottom of container. Otherwise, all orientations are allowed.
<b>Syntax</b>	Property bKeepBasicOrientationOnSimpleLoad As Bool
<b>Data Type</b>	Bool

### □ CBM Property

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the volume of the SKU.
<b>Syntax</b>	Property CBM As Double
<b>Data Type</b>	Double

### □ Color Property

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the color of the SKU in RGB format. Set 0 to assign a random color.
<b>Syntax</b>	Property Color As Long
<b>Data Type</b>	Long

### □ CountToLoad Property

---

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the quantity of the SKU to be loaded.
<b>Syntax</b>	Property CountToLoad As Integer
<b>Remarks</b>	Use the <i>LoadedCount</i> property to read the number of loaded for the SKU after the optimization.
<b>Data Type</b>	Integer

❑ **DepartureTime Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the departure time of the SKU in a string.
<b>Syntax</b>	Property DepartureTime As String
<b>Data Type</b>	String

❑ **Description Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the description of the SKU.
<b>Syntax</b>	Property Description As String
<b>Data Type</b>	String

❑ **GroupName Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the group name of the SKU.
<b>Syntax</b>	Property GroupName As String
<b>Data Type</b>	String

❑ **Height Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the height of the SKU.
<b>Syntax</b>	Property Height As Double
<b>Data Type</b>	Double

❑ **Length Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the length of the SKU.
<b>Syntax</b>	Property Length As Double
<b>Data Type</b>	Double

❑ **LoadDir1MaxLayer Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the max stacks for the orientation #1 of the SKU.
<b>Syntax</b>	Property LoadDir1MaxLayer As Integer

---

<b>Data Type</b>	Integer
------------------	---------

❑ **LoadDir2MaxLayer Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the max stacks for the orientation #2 of the SKU.
<b>Syntax</b>	Property LoadDir1MaxLayer As Integer
<b>Data Type</b>	Integer

❑ **LoadDir3MaxLayer Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the max stacks for the orientation #3 of the SKU.
<b>Syntax</b>	Property LoadDir3MaxLayer As Integer
<b>Data Type</b>	Integer

❑ **LoadDir4MaxLayer Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the max stacks for the orientation #4 of the SKU.
<b>Syntax</b>	Property LoadDir4MaxLayer As Integer
<b>Data Type</b>	Integer

❑ **LoadDir5MaxLayer Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the max stacks for the orientation #5 of the SKU.
<b>Syntax</b>	Property LoadDir5MaxLayer As Integer
<b>Data Type</b>	Integer

❑ **LoadDir6MaxLayer Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the max stacks for the orientation #6 of the SKU.
<b>Syntax</b>	Property LoadDir6MaxLayer As Integer
<b>Data Type</b>	Integer

❑ **LoadedCount Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Returns the number of loaded for the SKU.
<b>Syntax</b>	Property LoadedCount As Integer
<b>Data Type</b>	Integer

❑ **LoadSequence Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
-------------------	-----------------------

---

---

<b>Description</b>	Sets or returns the load sequence of the SKU.
<b>Syntax</b>	Property LoadSequence As Integer
<b>Data Type</b>	Integer

❑ **Name Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the name of the SKU.
<b>Syntax</b>	Property Name As String
<b>Data Type</b>	String

❑ **NetWeight Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the net weight of the SKU.
<b>Syntax</b>	Property NetWeight As Double
<b>Data Type</b>	Double

❑ **Orientation Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the SKU orientations permitted to the optimization.
<b>Syntax</b>	Property Orientation As ItemLoadDirType
<b>Remarks</b>	A constant to permit the orientations of SKU. The constant <i>ItemLoadDirType</i> has the following meanings.

Value	Description	Enum
1	Permit orientation #1	<i>dir1</i>
2	Permit orientation #2	<i>dir2</i>
3	Permit orientation #1 and #2	<i>dirBasic</i>
4	Permit orientation #3	<i>dir3</i>
8	Permit orientation #4	<i>dir4</i>
16	Permit orientation #5	<i>dir5</i>
32	Permit orientation #6	<i>dir6</i>
63	Permit all orientations (#1,2,3,4,5,6)	<i>dirAll</i>

<b>Data Type</b>	ItemLoadDirType
------------------	-----------------

❑ **PrimaryOrientationIndex Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the primary orientation among the permitted ones.
<b>Syntax</b>	Property PrimaryOrientationIndex As Integer
<b>Data Type</b>	Integer

❑ **Property1 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
-------------------	-----------------------

---

<b>Description</b>	Sets or returns the property1 of the SKU.
<b>Syntax</b>	Property Property1 As String
<b>Data Type</b>	String

❑ **Property2 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property2 of the SKU.
<b>Syntax</b>	Property Property2 As String
<b>Data Type</b>	String

❑ **Property3 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property3 of the SKU.
<b>Syntax</b>	Property Property3 As String
<b>Data Type</b>	String

❑ **Property4 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property4 of the SKU.
<b>Syntax</b>	Property Property4 As String
<b>Data Type</b>	String

❑ **Property5 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property5 of the SKU.
<b>Syntax</b>	Property Property5 As String
<b>Data Type</b>	String

❑ **Property6 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property6 of the SKU.
<b>Syntax</b>	Property Property6 As String
<b>Data Type</b>	String

❑ **Property7 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property7 of the SKU.
<b>Syntax</b>	Property Property7 As String
<b>Data Type</b>	String

❑ **Property8 Property**

---

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property8 of the SKU.
<b>Syntax</b>	Property Property8 As String
<b>Data Type</b>	String

□ **Property9 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property9 of the SKU.
<b>Syntax</b>	Property Property9 As String
<b>Data Type</b>	String

□ **Property10 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property10 of the SKU.
<b>Syntax</b>	Property Property10 As String
<b>Data Type</b>	String

□ **Property11 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property11 of the SKU.
<b>Syntax</b>	Property Property11 As String
<b>Data Type</b>	String

□ **Property12 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property12 of the SKU.
<b>Syntax</b>	Property Property12 As String
<b>Data Type</b>	String

□ **Property13 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property13 of the SKU.
<b>Syntax</b>	Property Property13 As String
<b>Data Type</b>	String

□ **Property14 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property14 of the SKU.
<b>Syntax</b>	Property Property14 As String
<b>Data Type</b>	String

---

❑ **Property15 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property15 of the SKU.
<b>Syntax</b>	Property Property15 As String
<b>Data Type</b>	String

❑ **Property16 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property16 of the SKU.
<b>Syntax</b>	Property Property16 As String
<b>Data Type</b>	String

❑ **Property17 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property17 of the SKU.
<b>Syntax</b>	Property Property17 As String
<b>Data Type</b>	String

❑ **Property18 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property18 of the SKU.
<b>Syntax</b>	Property Property18 As String
<b>Data Type</b>	String

❑ **Property19 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property19 of the SKU.
<b>Syntax</b>	Property Property19 As String
<b>Data Type</b>	String

❑ **Property20 Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the property20 of the SKU.
<b>Syntax</b>	Property Property20 As String
<b>Data Type</b>	String

❑ **SecondaryOrientationIndexAtLastSpace Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the orientation to allow placing the SKU into the last space at near top of the door.

---

<b>Syntax</b>	Property SecondaryOrientationIndexAtLastSpace As Integer
<b>Remarks</b>	Use this property if you like to allow an exceptional orientation could be placed into the near top spaces at the door.

<b>Data Type</b>	Integer
------------------	---------

❑ **SetRatio Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the set ratio of the SKU.
<b>Syntax</b>	Property SetRatio As Double
<b>Remarks</b>	This property is effective only if the <i>SimType</i> of the <i>Calculator</i> is <i>simSetLoadByQuantity</i> or <i>simSetLoadByQuantity</i> .
<b>Data Type</b>	Double

❑ **SimpleLoadLowerLayAllowOverhang Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns whether an overhang is allowed to the single load optimization of the SKU. Use the SimpleLoadOverhangLength and SimpleLoadOverhangWidth to get or set the max allowed overhang.
<b>Syntax</b>	Property SimpleLoadLowerLayAllowOverhang As Bool
<b>Data Type</b>	Bool

❑ **SimpleLoadLowerLayerPatternType Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU														
<b>Description</b>	Sets or returns the pattern type for the bottom layers to be applied to the unit load with this SKU.														
<b>Syntax</b>	Property SimpleLoadLowerLayerPatternType As Integer														
<b>Remarks</b>	<table border="0"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>1 block pattern type</td> </tr> <tr> <td>1</td> <td>2 blocks pattern type</td> </tr> <tr> <td>2</td> <td>4 blocks pattern type</td> </tr> <tr> <td>4</td> <td>3 blocks pattern type</td> </tr> <tr> <td>100</td> <td>Multi-surface</td> </tr> <tr> <td>9</td> <td>Best fit</td> </tr> </tbody> </table>	Value	Description	0	1 block pattern type	1	2 blocks pattern type	2	4 blocks pattern type	4	3 blocks pattern type	100	Multi-surface	9	Best fit
Value	Description														
0	1 block pattern type														
1	2 blocks pattern type														
2	4 blocks pattern type														
4	3 blocks pattern type														
100	Multi-surface														
9	Best fit														
<b>Data Type</b>	Integer														

---

### ❑ SimpleLoadUpperLayerPatternType Property

<b>Applies To</b>	LoadOptimizerLib.ISKU														
<b>Description</b>	Sets or returns the pattern type for the top layers to be applied to the unit load with this SKU. Top layers could be ignored if the space on the bottom layers is too small either the turning orientations of the SKU were not allowed. Please set 104 to this option to enforce the top layers to be empty.														
<b>Syntax</b>	Property SimpleLoadLowerLayerPatternType As Integer														
<b>Remarks</b>	<table><thead><tr><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>0</td><td>1 block pattern type</td></tr><tr><td>1</td><td>2 blocks pattern type</td></tr><tr><td>2</td><td>4 blocks pattern type</td></tr><tr><td>4</td><td>3 blocks pattern type</td></tr><tr><td>9</td><td>Best fit</td></tr><tr><td>104</td><td>Always empty the top layers</td></tr></tbody></table>	Value	Description	0	1 block pattern type	1	2 blocks pattern type	2	4 blocks pattern type	4	3 blocks pattern type	9	Best fit	104	Always empty the top layers
Value	Description														
0	1 block pattern type														
1	2 blocks pattern type														
2	4 blocks pattern type														
4	3 blocks pattern type														
9	Best fit														
104	Always empty the top layers														
<b>Data Type</b>	Integer														

### ❑ StackValue Property

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the stack value of the SKU.
<b>Syntax</b>	Property StackValue As Integer
<b>Remarks</b>	This property is effective only if the <i>UploadRule</i> of the <i>Calculator</i> is <i>uploadLoose</i> .
<b>Data Type</b>	Integer

### ❑ SubPackQty Property

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the number of pack inside the SKU.
<b>Syntax</b>	Property SubPackQty As Long
<b>Data Type</b>	Long

### ❑ UnitLoadBLOBStream Property

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or returns the unitload of the SKU.
<b>Syntax</b>	Property UnitLoadBLOBStream As Object
<b>Remarks</b>	The SKU with a unitload assigned with this property is recognized as a pallet load and drawn in full 3D pallet load inside the container.
<b>Data Type</b>	Object

### ❑ UnitloadContainer Property

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Returns the FilledContainer object indicating the unitload of the SKU.
<b>Syntax</b>	Property UnitloadContainer As FilledContainer

---

**Remarks** Use this property to access the unitload properties of the SKU. The unitload should be created inside the SKU or assigned with *UnitLoadBLOBStream* outside the SKU already.

**Data Type** FilledContainer

#### ❑ **UnitPrice Property**

**Applies To** LoadOptimizerLib.ISKU

**Description** Sets or returns the unit price (cost) of the SKU.

**Syntax** Property UnitPrice As Double

**Data Type** Double

#### ❑ **UnloadedCount Property**

**Applies To** LoadOptimizerLib.ISKU

**Description** Returns the number of cargos remaining for the SKU after the optimization.

**Syntax** Property UnloadedCount As Integer

**Data Type** Integer

#### ❑ **Weight Property**

**Applies To** LoadOptimizerLib.ISKU

**Description** Sets or returns the weight of the SKU.

**Syntax** Property Weight As Double

**Data Type** Double

#### ❑ **Width Property**

**Applies To** LoadOptimizerLib.ISKU

**Description** Sets or returns the width of the SKU.

**Syntax** Property Width As Double

**Data Type** Double

#### ❑ **DeadStackType Property**

**Applies To** LoadOptimizerLib.ISKU

**Description** Sets or gets the floor stacking type of the SKU.

**Syntax** Property DeadStackType As \_DeadStackType

**Data Type** \_DeadStackType

**Remark**

Constant	Description	Enumeration
0	The two options below are disregarded and the cargos are placed where it's most efficient in relation to other items in the load.	<i>DeadStackBestFit</i>
1	Any solutions are disregarded in which the cargo is not placed on the floor.	<i>DeadStackBottomOnly</i>
2	Any solutions are disregarded in	<i>DeadStackNoBottom</i>

---

which the cargo is placed on the floor.

In order to activate this property, you should set *FloorStack* to the *StackingRule* of the *Calculator* class.

It can be used at following purpose;

- ① Preventing heavy boxes from being placed on top of light boxes
- ② Putting a pallet on top of other with exactly same footprint
- ③ Stick two different boxes together vertically

#### ❑ **DeadStackOthersAllowedOnMe Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or gets if the SKU can support others.
<b>Syntax</b>	Property DeadStackOthersAllowedOnMe As Boolean
<b>Data Type</b>	Boolean
<b>Remark</b>	In order to activate this property, you should set <i>FloorStack</i> to the <i>StackingRule</i> of the <i>Calculator</i> class.

#### ❑ **MaxWeightAllowedOnMe Property**

<b>Applies To</b>	LoadOptimizerLib.ISKU
<b>Description</b>	Sets or gets the weight the SKU can support.
<b>Syntax</b>	Property MaxWeightAllowedOnMe As Double
<b>Data Type</b>	Double
<b>Remark</b>	In order to activate this property, you should set <i>True</i> to the <i>bUseSafeStacking</i> of the <i>Calculator</i> class.

## 6.3 SKU Object Methods, Functions

#### ❑ **SetPropertyBasic Method**

<b>Applies To</b>	LoadOptimizerLib.ISKU												
<b>Description</b>	Sets basic properties as the name, quantity, length, width and height of the SKU.												
<b>Syntax</b>	Sub SetPropertyBasic( <i>Name</i> As String, <i>CountToLoad</i> As Long, <i>Length</i> As Double, <i>Width</i> As Double, <i>Height</i> As Double)												
<b>Parameter</b>	<table border="1"><thead><tr><th>Parameter</th><th>Description</th></tr></thead><tbody><tr><td><i>Name</i></td><td>Name of the SKU</td></tr><tr><td><i>CountToLoad</i></td><td>Quantity of the SKU</td></tr><tr><td><i>Length</i></td><td>Length of the SKU</td></tr><tr><td><i>Width</i></td><td>Width of the SKU</td></tr><tr><td><i>Height</i></td><td>Height of the SKU</td></tr></tbody></table>	Parameter	Description	<i>Name</i>	Name of the SKU	<i>CountToLoad</i>	Quantity of the SKU	<i>Length</i>	Length of the SKU	<i>Width</i>	Width of the SKU	<i>Height</i>	Height of the SKU
Parameter	Description												
<i>Name</i>	Name of the SKU												
<i>CountToLoad</i>	Quantity of the SKU												
<i>Length</i>	Length of the SKU												
<i>Width</i>	Width of the SKU												
<i>Height</i>	Height of the SKU												
<b>Data Type</b>	None												

---

## 7 SKUs Object

The *SKUs* is a collection to store multiple *SKU* objects. The *SKUs* is accessible through the property *SKUs* of the *Calculator* object. Once the *SKUs* is acquired, you can iterate all elements in it.

[Picture8. SKUs Object]

### 7.1 SKUs Object Overview

#### □ SKUs Object Properties, Collections

Count	Item
TotalCBM	TotalLoadedQty

#### □ SKUs Object Method

AddNewSKU	RemoveAll
RemoveAt	

#### □ SKUs Object Event

None
------

### 7.2 SKUs Object Properties

#### □ Count Property

<b>Applies To</b>	LoadOptimizerLib.ISKUs
<b>Description</b>	Return the number of items (SKUs) in the collection.
<b>Syntax</b>	Property Count As Long
<b>Data Type</b>	Long

#### □ Item Property

<b>Applies To</b>	LoadOptimizerLib.ISKUs
<b>Description</b>	Returns an item (SKU) in the collection.

---

<b>Syntax</b>	Property Item( <i>index</i> As Long)				
<b>Parameter</b>	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><i>Index</i></td> <td>An index to item between 1 and <i>Count</i>.</td> </tr> </tbody> </table>	Parameter	Description	<i>Index</i>	An index to item between 1 and <i>Count</i> .
Parameter	Description				
<i>Index</i>	An index to item between 1 and <i>Count</i> .				
<b>Data Type</b>	None				

□ **TotalCBM Property**

<b>Applies To</b>	LoadOptimizerLib.ISKUs
<b>Description</b>	Returns the sum of volume for all SKUs in the collection.
<b>Syntax</b>	Property TotalCBM As Double
<b>Data Type</b>	Double

□ **TotalLoadedQty Property**

<b>Applies To</b>	LoadOptimizerLib.ISKUs
<b>Description</b>	Returns the sum of load quantities for all SKUs in the collection.
<b>Syntax</b>	Property TotalLoadedQty As Long
<b>Data Type</b>	Long

## 7.3 SKUs Object Methods, Functions

□ **AddNewSKU Functions**

<b>Applies To</b>	LoadOptimizerLib.ISKUs
<b>Description</b>	Adds a new SKU into the collection and returns <i>SKU</i> object to allow you to set properties of the new SKU.
<b>Syntax</b>	Sub AddNewSKU() As SKU
<b>Example</b> (Visual Basic Code)	<pre>Dim oSKUs, oSKU  Set oSKUs = oOptimizer.SKUs  Set oSKU = oSKUs.AddNewSKU oSKU.Name = "AA-101" oSKU.Length = 690 oSKU.Width = 900 oSKU.Height = 500 oSKU.CountToLoad = 100 oSKU.Orientation = dirBasic  Set oSKU = oSKUs.AddNewSKU oSKU.Name = "BB-303" oSKU.Length = 900 oSKU.Width = 800 oSKU.Height = 550 oSKU.CountToLoad = 100 oSKU.Orientation = dirBasic</pre>

---

**Data Type** SKU

❑ **RemoveAll Method**

**Applies To** LoadOptimizerLib.ISKUs

**Description** Remove all items from the collection.

**Syntax** Sub RemoveAll()

**Data Type** None

❑ **RemoveAt Method**

**Applies To** LoadOptimizerLib.ISKUs

**Description** Remove an item from the collection.

**Syntax** Sub RemoveAt(index As Long)

**Parameters**

Parameter	Description
<i>Index</i>	An index to item between 1 and <i>Count</i>

**Data Type** None

## 8 FilledContainer Object

The *FilledContainer* object provides a set of properties such as name, size, weight and load information of one loaded container. By using this object, you can access one loaded container after the optimization. The following picture shows a sample image for the loaded container.

The following picture shows the relations of the three objects – *Calculator*, *FilledContainers* and *FilledContainer* which means the *FilledContainer* is accessible only through the *FilledContainers*.

[Picture 12.FilledContainer Object]

### 8.1 FilledContainer Object Overview

#### □ FilledContainer Object Properties, Collections

Alias	AppliedBandType
Comment	ContainerData
ContainerName	ContainerWeight
CubeEfficiency	DepartureTime
GrossItemCount	Height
ID	IsAnglePanelApplied
IsTopPanelApplied	IsWrappingApplied

ItemCount	ItemCount
Length	LimitCE
LimitWeight	LoadedCBM
LoadedWeight	Name
NetWeight	OutHeight
OutLength	OutWidth
PatternEditType	ProductionLine
Property1	Property2
Property3	Property4
Property5	Property6
Property7	Property8
Property9	Property10
SimpleLoadCustomPatternType	SimpleLoadHeight
SimpleLoadLayerCount	SimpleLoadLength
SimpleLoadPlaneEfficiency	SimpleLoadWidth
Solutions	SpacesInContainer
Width	

❑ **FilledContainer Object Method**

ApplyAnglePanel	ApplyBanding
ApplyHandlingSign	ApplyTopPanel
ApplyWrapping	<del>DisplayPattern</del>
GetPatternBLOBStream	<del>ReloadFo</del>
SaveToFile	<del>UnloadBlockByIndex</del>

❑ **FilledContainer Object Event**

None
------

## 8.2 FilledContainer Object Properties

❑ **Alias Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the alias 1 of the container.
<b>Syntax</b>	Property Alias As String
<b>Data Type</b>	String

❑ **AppliedBandType Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the banding type applied to the container if the type is a pallet.

---

<b>Syntax</b>	Property AppliedBandType As _BandType		
<b>Remarks</b>	Value	Description	Enum
	0	No banding applied	<i>BandNone</i>
	1	2 straps along the length	<i>Band2LineLengthSide</i>
	2	2 straps along the width	<i>Band2LineWidthSide</i>
	3	2 straps along the length and 2 straps along the width	<i>Band2LineBothSide</i>
<b>Data Type</b>	_BandType		

#### □ **Comment Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the comment of the container.
<b>Syntax</b>	Property Comment As String
<b>Data Type</b>	String

#### □ **ContainerName Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the name of the container type applied to this container.
<b>Syntax</b>	Property ContainerName As String
<b>Data Type</b>	String

#### □ **ContainerWeight Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the weight of the container type (without load weight).
<b>Syntax</b>	Property ContainerWeight As Double
<b>Data Type</b>	Double

#### □ **CubeEfficiency Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the volume efficiency in percentage of the container.
<b>Remarks</b>	Read only
<b>Syntax</b>	Property CubeEfficiency As Double
<b>Data Type</b>	Double

#### □ **DepartureTime Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the departure time of the container.
<b>Syntax</b>	Property DepartureTime As String
<b>Remarks</b>	This property does not affect the calculation.
<b>Data Type</b>	String

---

### ❑ **GrossItemCount Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the gross load quantity of the container.
<b>Syntax</b>	Property GrossItemCount As Long
<b>Remarks</b>	Read only
<b>Data Type</b>	Long

### ❑ **Height Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the height of the container (it is equal the internal height of the container type applied to the container).
<b>Remarks</b>	Read only
<b>Syntax</b>	Property Height As Double
<b>Data Type</b>	Double

### ❑ **ID Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the ID of the container.
<b>Syntax</b>	Property ID As Long
<b>Remarks</b>	Read only. Every container is given an ID after the calculation.
<b>Data Type</b>	Long

### ❑ **IsAnglePanelApplied Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns whether the angle panel (or post guard) is applied to the container if it is pallet type.
<b>Syntax</b>	Property IsAnglePanelApplied As Bool
<b>Remarks</b>	Read only
<b>Data Type</b>	Bool

### ❑ **IsTopPanelApplied Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns whether the top panel is applied to the container if it is pallet type.
<b>Syntax</b>	Property IsTopPanelApplied As Bool
<b>Remarks</b>	Read only
<b>Data Type</b>	Bool

### ❑ **IsWrappingApplied Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns whether the wrapping is applied to the container if it is pallet type.

---

<b>Syntax</b>	Property IsWrappingApplied As Bool
<b>Remarks</b>	Read only
<b>Data Type</b>	Bool

□ **ItemCount Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the number of load inside the container.
<b>Syntax</b>	Property ItemCount As Integer
<b>Remarks</b>	Read only
<b>Data Type</b>	Integer

□ **Length Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the length of the container (it is equal the internal length of the container type applied to the container).
<b>Syntax</b>	Property Length As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **LimitCE Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the max volume percentage of the container.
<b>Syntax</b>	Property LimitCE As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **LimitWeight Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the max weight of the container.
<b>Syntax</b>	Property LimitWeight As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **LoadedCBM Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the volume of the load inside the container.
<b>Syntax</b>	Property LoadedCBM As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **LoadedWeight Property**

---

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the gross weight (load weight + container weight) of the container.
<b>Syntax</b>	Property LoadedWeight As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **Name Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the name of the container.
<b>Syntax</b>	Property Name As String
<b>Remarks</b>	Every container has a name created from the naming rule. The naming rule is defined with the method, <i>Calculator.SetContainerNamingRule</i> .
<b>Data Type</b>	String

□ **NetWeight Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the load weight inside the container.
<b>Syntax</b>	Property NetWeight As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **OutHeight Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the external height of the container.
<b>Syntax</b>	Property OutHeight As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **OutLength Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the external length of the container.
<b>Syntax</b>	Property OutLength As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **OutWidth Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the external width of the container.
<b>Syntax</b>	Property OutWidth As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

---

## ❑ **ProductionLine Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the production line of the container.
<b>Syntax</b>	Property ProductionLine As String
<b>Remarks</b>	This property does not affect the calculation.
<b>Data Type</b>	String

## ❑ **Property1 Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the property1 of the container.
<b>Syntax</b>	Property Property1 As String
<b>Data Type</b>	String

## ❑ **Property2 Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the property2 of the container.
<b>Syntax</b>	Property Property2 As String
<b>Data Type</b>	String

## ❑ **Property3 Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the property3 of the container.
<b>Syntax</b>	Property Property3 As String
<b>Data Type</b>	String

## ❑ **Property4 Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the property4 of the container.
<b>Syntax</b>	Property Property4 As String
<b>Data Type</b>	String

## ❑ **Property5 Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the property5 of the container.
<b>Syntax</b>	Property Property5 As String
<b>Data Type</b>	String

## ❑ **Property6 Property**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Sets or returns the property6 of the container.

---

**Syntax** Property Property6 As String

**Data Type** String

□ **Property7 Property**

**Applies To** LoadOptimizerLib.IContainer

**Description** Sets or returns the property7 of the container.

**Syntax** Property Property7 As String

**Data Type** String

□ **Property8 Property**

**Applies To** LoadOptimizerLib.IContainer

**Description** Sets or returns the property8 of the container.

**Syntax** Property Property8 As String

**Data Type** String

□ **Property9 Property**

**Applies To** LoadOptimizerLib.IContainer

**Description** Sets or returns the property9 of the container.

**Syntax** Property Property9 As String

**Data Type** String

□ **Property10 Property**

**Applies To** LoadOptimizerLib.IContainer

**Description** Sets or returns the property10 of the container.

**Syntax** Property Property10 As String

**Data Type** String

□ **SimpleLoadHeight Property**

**Applies To** LoadOptimizerLib.IContainer

**Description** Returns the height of the load if the container is filled with this SKU only.

**Syntax** Property SimpleLoadHeight As Double

**Remarks** Read only

**Data Type** Double

□ **SimpleLoadLayerCount Property**

**Applies To** LoadOptimizerLib.IContainer

**Description** Returns the number of load layers if the container is filled with this SKU only.

**Syntax** Property SimpleLoadLayerCount As Integer

**Remarks** Read only

**Data Type** Integer

---

### ❑ SimpleLoadLength Property

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the length of the load if the container is filled with this SKU only.
<b>Syntax</b>	Property SimpleLoadLength As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

### ❑ SimpleLoadPlaneEfficiency Property

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the area efficiency of the load if the container is filled with this SKU only.
<b>Syntax</b>	Property SimpleLoadPlaneEfficiency As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

### ❑ SimpleLoadWidth Property

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the width of the load if the container is filled with this SKU only.
<b>Syntax</b>	Property SimpleLoadWidth As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

### ❑ Solutions Property

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the collection of the <i>Solution</i> object. The <i>Solution</i> object represents load information of the SKU loaded in the container.
<b>Syntax</b>	Property Solutions As Solutions
<b>Remarks</b>	Read only
<b>Data Type</b>	<i>Solutions</i>

### ❑ SpacesInContainer Property

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the collection of the <i>SpaceInContainer</i> object. The <i>SpaceInContainer</i> object represents space information in the container.
<b>Syntax</b>	Property SpacesInContainer As SpacesInContainer
<b>Remarks</b>	Read only
<b>Data Type</b>	<i>SpacesInContainer</i>

### ❑ Width Property

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the width of the container (it is equal the internal width of the container type applied to the container).

---

<b>Syntax</b>	Property Width As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

## 8.3 FilledContainer Object Methods, Functions

### □ ApplyAnglePanel Method

<b>Applies To</b>	LoadOptimizerLib.IContainer						
<b>Description</b>	Add angle panels (or post guards) on the pallet load						
<b>Syntax</b>	Sub ApplyAnglePanel( <i>PanelWidth</i> As Double, <i>PanelColor</i> As Long)						
<b>Parameters</b>	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><i>PanelWidth</i></td> <td>The size of panel</td> </tr> <tr> <td><i>PanelColor</i></td> <td>The color of panel</td> </tr> </tbody> </table>	Parameter	Description	<i>PanelWidth</i>	The size of panel	<i>PanelColor</i>	The color of panel
Parameter	Description						
<i>PanelWidth</i>	The size of panel						
<i>PanelColor</i>	The color of panel						
<b>Remarks</b>							
<b>Data Type</b>	None						

### □ ApplyBanding Method

<b>Applies To</b>	LoadOptimizerLib.IContainer								
<b>Description</b>	Add banding straps on the pallet load								
<b>Syntax</b>	Sub ApplyBanding( <i>BandWidth</i> As Double, <i>BandColor</i> As Long, <i>BandType</i> As _BandType)								
<b>Parameters</b>	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><i>BandWidth</i></td> <td>The size of strap</td> </tr> <tr> <td><i>BandColor</i></td> <td>The color of strap</td> </tr> <tr> <td><i>BandType</i></td> <td>The type of strap.</td> </tr> </tbody> </table>	Parameter	Description	<i>BandWidth</i>	The size of strap	<i>BandColor</i>	The color of strap	<i>BandType</i>	The type of strap.
Parameter	Description								
<i>BandWidth</i>	The size of strap								
<i>BandColor</i>	The color of strap								
<i>BandType</i>	The type of strap.								
<b>Remarks</b>	For more about <i>BandType</i> , see the <i>AppliedBandType</i> property.								
<b>Data Type</b>	None								

### □ ApplyHandlingSign Method

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Add handling sign on the pallet load
<b>Syntax</b>	Sub ApplyHandlingSign()
<b>Parameters</b>	None
<b>Remarks</b>	
<b>Data Type</b>	None

### □ ApplyTopPanel Method

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Add top panel on the pallet load
<b>Syntax</b>	Sub ApplyTopPanel( <i>PanelLength</i> As Double, <i>PanelWidth</i> As Double, <i>PanelColor</i>

---

	As Long)								
<b>Parameters</b>	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><i>PanelLength</i></td> <td>The length of panel</td> </tr> <tr> <td><i>PanelWidth</i></td> <td>The width of panel</td> </tr> <tr> <td><i>PanelColor</i></td> <td>The color of panel</td> </tr> </tbody> </table>	Parameter	Description	<i>PanelLength</i>	The length of panel	<i>PanelWidth</i>	The width of panel	<i>PanelColor</i>	The color of panel
Parameter	Description								
<i>PanelLength</i>	The length of panel								
<i>PanelWidth</i>	The width of panel								
<i>PanelColor</i>	The color of panel								
<b>Remarks</b>									
<b>Data Type</b>	None								

□ **ApplyWrapping Method**

<b>Applies To</b>	LoadOptimizerLib.IContainer				
<b>Description</b>	Add wrapping on the pallet load				
<b>Syntax</b>	Sub ApplyWrapping( <i>WrapColor</i> As Long)				
<b>Parameters</b>	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><i>WrapColor</i></td> <td>The color of warpping</td> </tr> </tbody> </table>	Parameter	Description	<i>WrapColor</i>	The color of warpping
Parameter	Description				
<i>WrapColor</i>	The color of warpping				
<b>Remarks</b>					
<b>Data Type</b>	None				

□ **GetPatternBLOBStream Method**

<b>Applies To</b>	LoadOptimizerLib.IContainer
<b>Description</b>	Returns the stream of the container.
<b>Syntax</b>	Function GetPatternBLOBStream() As Object
<b>Parameters</b>	None
<b>Remarks</b>	
<b>Data Type</b>	ADO::Stream

□ **SaveToFile Method**

<b>Applies To</b>	LoadOptimizerLib.IContainer				
<b>Description</b>	Store the container to a file.				
<b>Syntax</b>	Sub SaveToFile( <i>strFullPathName</i> As String)				
<b>Parameters</b>	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><i>strFullPathName</i></td> <td>A full path name to write</td> </tr> </tbody> </table>	Parameter	Description	<i>strFullPathName</i>	A full path name to write
Parameter	Description				
<i>strFullPathName</i>	A full path name to write				
<b>Data Type</b>	None				

---

## 9 FilledContainers Object

The *FilledContainers* is a collection to store multiple *FilledContainer* objects. The *FilledContainers* is accessible through the property *FilledContainers* of the *Calculator* object. Once the *FilledContainers* is acquired, you can iterate all elements in it.

[Picture 11.FilledContainers Object]

### 9.1 FilledContainers Object Overview

#### ❑ FilledContainers Object Properties, Collections

AverageCubeEfficiency	Count
Item	TotalGrossLoadCount
TotalLoadCount	

#### ❑ FilledContainers Object Method

AddEmptyContainer	GetContainerByID
-------------------	------------------

#### ❑ FilledContainers Object Event

None
------

### 9.2 FilledContainers Object Properties

#### ❑ AverageCubeEfficiency Property

<b>Applies To</b>	LoadOptimizerLib.IContainerers
<b>Description</b>	Returns the average volume efficiency for the all containers in the collection.
<b>Syntax</b>	Property AverageCubeEfficiency As Double
<b>Data Type</b>	Double

#### ❑ Count Property

<b>Applies To</b>	LoadOptimizerLib.IContainerers
<b>Description</b>	Returns the number of items (containers) in the collection.

---

**Syntax** Property Count As Long

**Data Type** Long

#### □ **Item Property**

**Applies To** LoadOptimizerLib.IContainerers

**Description** Returns an item (container) in the collection.

**Syntax** Property Item(*index* As Long)

**Parameter**

Parameter	Description
<i>index</i>	An index to an item between 1 and <i>Count</i> .

**Data Type** None

#### □ **TotalGrossLoadCount Property**

**Applies To** LoadOptimizerLib.IContainerers

**Description** Returns sum of gross load quantities for the all containers in the collection.

**Syntax** Property TotalGrossLoadCount As Long

**Data Type** Long

#### □ **TotalLoadCount Property**

**Applies To** LoadOptimizerLib.IContainerers

**Description** Returns sum of load quantities for the all containers in the collection.

**Syntax** Property TotalLoadCount As Integer

**Data Type** Integer

## 9.3 FilledContainers Object Methods, Functions

#### □ **AddEmptyContainer Functions**

**Applies To** LoadOptimizerLib.IContainerers

**Description** Add an empty container to the collections and return the *FilledContainer* object to allow you to access the new container.

**Syntax** Function AddEmptyContainer() as FilledContainer

**Data Type** FilledContainer

#### □ **GetContainerByID Method**

**Applies To** LoadOptimizerLib.IContainerers

**Description** Find a container with an ID in the collection.

**Syntax** Function GetContainerByID(ID As Long)

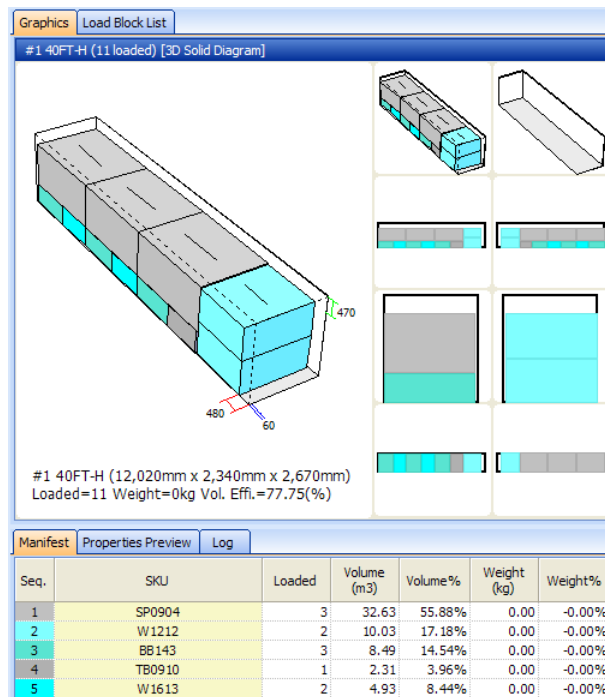

**Parameter**

Parameter	Description
<i>ID</i>	An ID of container to find

**Data Type** None

# 10 Solution Object

The *Solution* object provides a set of properties for a SKU loaded in the container and its information such as load volume, quantity and weight. By using this object, you can access one line of the manifest of the loaded container. The following picture shows the conceptual image for a manifest of the loaded container.

The following picture shows the relations of the five objects – *Calculator*, *FilledContainers*, *FilledContainer*, *Solutions* and *Solution* which means the *Solution* is accessible only through the *Solutions*.

[Picture13.Solution Object]

---

## 10.1 Solution Object Overview

### □ Solution Object Properties, Collections

ActionType	Color
ContainerNameOnUnitLoad	DepartureTime
Description	GrossLoadedCount
GroupName	IsUnitloadContainer
ItemAlias	ItemAlias2
ItemCBM	ItemHeight
ItemLength	ItemName
ItemProperty1	ItemProperty2
ItemProperty3	ItemProperty4
ItemProperty5	ItemProperty6
ItemProperty7	ItemProperty8
ItemProperty9	ItemProperty10
ItemWeight	ItemWidth
LoadedCount	LoadedItem
SetRatio	SubPackQty

### □ Solution Object Method

None
------

### □ Solution Object Event

None
------

## 10.2 Solution Object Properties

### □ Color Property

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the color of the SKU
<b>Syntax</b>	Property Color As Long
<b>Data Type</b>	Long

### □ ContainerNameOnUnitLoad Property

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the name of the pallet if the SKU is a pallet load
<b>Syntax</b>	Property ContainerNameOnUnitLoad As String
<b>Data Type</b>	Long

---

### ❑ **DepartureTime Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the departure time of the SKU
<b>Syntax</b>	Property DepartureTime As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

### ❑ **Description Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the description of the SKU
<b>Syntax</b>	Property Description As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

### ❑ **GrossLoadedCount Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the gross load quantity of the SKU. It equals <i>LoadedCount</i> x <i>SubPackQty</i> of the SKU.
<b>Syntax</b>	Property GrossLoadedCount As Long
<b>Remarks</b>	Read only
<b>Data Type</b>	Long

### ❑ **GroupName Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the group name of the SKU
<b>Syntax</b>	Property GroupName As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

### ❑ **IsUnitloadContainer Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns whether the SKU is a pallet load.
<b>Syntax</b>	Property IsUnitloadContainer As Bool
<b>Remarks</b>	Read only
<b>Data Type</b>	Bool

### ❑ **ItemAlias Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the alias of the SKU
<b>Syntax</b>	Property ItemAlias As String

---

<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemAlias2 Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the alias2 of the SKU
<b>Syntax</b>	Property ItemAlias2 As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemCBM Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the volume of the SKU
<b>Syntax</b>	Property ItemCBM As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **ItemHeight Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the height of the SKU
<b>Syntax</b>	Property ItemHeight As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **ItemLength Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the length of the SKU
<b>Syntax</b>	Property ItemLength As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **ItemName Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the name of the SKU
<b>Syntax</b>	Property ItemName As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemProperty1 Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
-------------------	----------------------------

---

<b>Description</b>	Returns the property1 of the SKU
<b>Syntax</b>	Property ItemProperty1 As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemProperty2 Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the property2 of the SKU
<b>Syntax</b>	Property ItemProperty2 As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemProperty3 Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the property3 of the SKU
<b>Syntax</b>	Property ItemProperty3 As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemProperty4 Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the property4 of the SKU
<b>Syntax</b>	Property ItemProperty4 As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemProperty5 Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the property5 of the SKU
<b>Syntax</b>	Property ItemProperty5 As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemProperty6 Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the property6 of the SKU
<b>Syntax</b>	Property ItemProperty6 As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemProperty7 Property**

---

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the property7 of the SKU
<b>Syntax</b>	Property ItemProperty7 As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemProperty8 Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the property8 of the SKU
<b>Syntax</b>	Property ItemProperty8 As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemProperty9 Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the property9 of the SKU
<b>Syntax</b>	Property ItemProperty9 As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemProperty10 Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the property10 of the SKU
<b>Syntax</b>	Property ItemProperty10 As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

□ **ItemWeight Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the weight of the SKU
<b>Syntax</b>	Property ItemWeight As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

□ **ItemWidth Property**

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the width of the SKU
<b>Syntax</b>	Property ItemWidth As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

---

### ❑ LoadedCount Property

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the number of load for the SKU
<b>Syntax</b>	Property LoadedCount As Long
<b>Remarks</b>	Read only
<b>Data Type</b>	Long

### ❑ LoadedItem Property

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the <i>SKU</i> object of the SKU to allow you to access the properties of the SKU
<b>Syntax</b>	Property LoadedItem As SKU
<b>Remarks</b>	Read only
<b>Data Type</b>	SKU

### ❑ SetRatio Property

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the set ratio of the SKU
<b>Syntax</b>	Property SetRatio As Integer
<b>Remarks</b>	Read only
<b>Data Type</b>	Integer

### ❑ SubPackQty Property

<b>Applies To</b>	LoadOptimizerLib.ISolution
<b>Description</b>	Returns the number of pack inside the SKU.
<b>Syntax</b>	Property SubPackQty As Long
<b>Remarks</b>	Read only
<b>Data Type</b>	Long

## 10.3 Solution Object Methods, Functions

### ❑ None

# 11 Solutions Object

The *Solutions* is a collection to store multiple *Solution* objects. The *Solutions* is accessible through the property *Solutions* of the *FilledContainer* object. Once the *Solutions* is acquired, you can iterate all elements in it.

[Picture12.Solutions Object]

## 11.1 Solutions Object Overview

-------

### ❑ Solutions Object Event

None
------

## 11.2 Solutions Object Properties

### ❑ Count Property

<b>Applies To</b>	LoadOptimizerLib.ISolutions
<b>Description</b>	Returns the number of item(solution)s in the collection
<b>Syntax</b>	Property Count As Long
<b>Data Type</b>	Long

### ❑ Item Property

<b>Applies To</b>	LoadOptimizerLib. ISolutions
<b>Description</b>	Returns an item (solution) in the collection.

---

<b>Syntax</b>	Property Item( <i>index</i> As Long)				
<b>Parameter</b>	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><i>index</i></td> <td>An index to an item between 1 and <i>Count</i>.</td> </tr> </tbody> </table>	Parameter	Description	<i>index</i>	An index to an item between 1 and <i>Count</i> .
Parameter	Description				
<i>index</i>	An index to an item between 1 and <i>Count</i> .				
<b>Data Type</b>	None				

## 11.3 Solutions Object Methods, Functions

### □ Reset Method

<b>Applies To</b>	LoadOptimizerLib.ISolutions
<b>Description</b>	Initialize the collection
<b>Syntax</b>	Sub Reset()
<b>Data Type</b>	None

## 12 SpaceInContainer Object

The *SpaceInContainer* object provides a set of properties for a space in the loaded container and the SKU inside the space if it is a filled space. Using this object, you can access a space in the loaded container. The space has two types – filled and empty as in the following picture.

A filled space

An empty space

The following picture shows the relations of the five objects – *Calculator*, *FilledContainers*, *FilledContainer*, *SpacesInContainer* and *SpaceInContainer* which means the *SpaceInContainer* is accessible only through the *SpacesInContainer*.

[Picture16.SpaceInContainer Object]

## 12.2 SpaceInContainer Object Properties

❑ **Height Property**

<b>Applies To</b>	LoadOptimizerLib.ISpaceInContainer
<b>Description</b>	Returns the height of the space
<b>Syntax</b>	Property Height As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

❑ **Length Property**

<b>Applies To</b>	LoadOptimizerLib.ISpaceInContainer
<b>Description</b>	Returns the length of the space
<b>Syntax</b>	Property Length As
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

❑ **LoadedItem Property**

<b>Applies To</b>	LoadOptimizerLib.ISpaceInContainer
<b>Description</b>	Returns the <i>SKU</i> object inside the space to allow you to access the properties of the SKU. If the space is empty, it returns NULL.
<b>Syntax</b>	Property LoadedItem As SKU
<b>Remarks</b>	Read only
<b>Data Type</b>	SKU

❑ **LoadedItemCount Property**

<b>Applies To</b>	LoadOptimizerLib.ISpaceInContainer
<b>Description</b>	Returns the number of SKU inside the space. If the space is empty, it returns 0.
<b>Syntax</b>	Property LoadedItemCount As Long
<b>Remarks</b>	Read only
<b>Data Type</b>	Long

❑ **LoadedItemName Property**

---

<b>Applies To</b>	LoadOptimizerLib.ISpaceInContainer
<b>Description</b>	Returns the name of SKU inside the space. If the space is empty, it returns "".
<b>Syntax</b>	Property LoadedItemName As String
<b>Remarks</b>	Read only
<b>Data Type</b>	String

❑ **Width Property**

<b>Applies To</b>	LoadOptimizerLib.ISpaceInContainer
<b>Description</b>	Returns the width of the space
<b>Syntax</b>	Property Width As Double
<b>Remarks</b>	Read only
<b>Data Type</b>	Double

## 13 SpacesInContainer Object

The *SpacesInContainer* is a collection to store multiple *SpaceInContainer* objects. The *SpacesInContainer* is accessible through the property *SpacesInContainer* of the *FilledContainer* object. Once the *SpacesInContainer* is acquired, you can iterate all elements in it.

[Picture15.SpacesInContainer Object]

## 13.2 SpaceInContainer Object Properties

### □ Count Property

<b>Applies To</b>	LoadOptimizerLib.ISpacesInContainer
<b>Description</b>	Returns the number of item(SpaceInContainer)s in the collection. It equals the sum of <i>GarbageSpaceCount</i> and <i>LoadedSpaceCount</i> .
<b>Syntax</b>	Property Count As Long
<b>Data Type</b>	Long

### □ GarbageSpaceAt Property

<b>Applies To</b>	LoadOptimizerLib. ISpacesInContainer				
<b>Description</b>	Returns an empty space in the collection.				
<b>Syntax</b>	Property GarbageSpaceAt(index As Long)				
<b>Parameter</b>	<table border="1"><thead><tr><th>Parameter</th><th>Description</th></tr></thead><tbody><tr><td><i>index</i></td><td>An index to an item between 1 and <i>GarbageSpaceCount</i></td></tr></tbody></table>	Parameter	Description	<i>index</i>	An index to an item between 1 and <i>GarbageSpaceCount</i>
Parameter	Description				
<i>index</i>	An index to an item between 1 and <i>GarbageSpaceCount</i>				
<b>Data Type</b>	None				

### □ GarbageSpaceCount Property

<b>Applies To</b>	LoadOptimizerLib. ISpacesInContainer
<b>Description</b>	Returns the number of empty spaces in the collection.
<b>Syntax</b>	Property GarbageSpaceCount As Long
<b>Data Type</b>	Long

### □ Item Property

<b>Applies To</b>	LoadOptimizerLib. ISpacesInContainer				
<b>Description</b>	Returns an item(space)s in the collection.				
<b>Syntax</b>	Property Item(index As Long)				
<b>Parameter</b>	<table border="1"><thead><tr><th>Parameter</th><th>Description</th></tr></thead><tbody><tr><td><i>index</i></td><td>An index to an item between 1 and <i>Count</i>.</td></tr></tbody></table>	Parameter	Description	<i>index</i>	An index to an item between 1 and <i>Count</i> .
Parameter	Description				
<i>index</i>	An index to an item between 1 and <i>Count</i> .				
<b>Data Type</b>	None				

### □ LoadedSpaceAt Property

<b>Applies To</b>	LoadOptimizerLib. ISpacesInContainer				
<b>Description</b>	Returns a space filled with a SKU in the collection.				
<b>Syntax</b>	Property LoadedSpaceAt(index As Long)				
<b>Parameter</b>	<table border="1"><thead><tr><th>Parameter</th><th>Description</th></tr></thead><tbody><tr><td><i>index</i></td><td>An index to an item between 1 and <i>LoadedSpaceCount</i>.</td></tr></tbody></table>	Parameter	Description	<i>index</i>	An index to an item between 1 and <i>LoadedSpaceCount</i> .
Parameter	Description				
<i>index</i>	An index to an item between 1 and <i>LoadedSpaceCount</i> .				
<b>Data Type</b>	None				

---

---

## ❑ **LoadedSpaceCount Property**

<b>Applies To</b>	LoadOptimizerLib. ISpacesInContainer
<b>Description</b>	Returns the number of spaces filled with a SKU in the collection.
<b>Syntax</b>	Property LoadedSpaceCount As Long
<b>Data Type</b>	None
